This Selected Issues paper reviews West African Economic and Monetary Union's (WAEMU) regional macroeconomic surveillance framework to control all sources of debt accumulation and ensure debt sustainability. WAEMU's regional surveillance framework aims at ensuring the sustainability of national fiscal policies and their consistency with the common monetary policy. While fiscal deficits have been the main driver of public debt across WAEMU member countries, the size of residual factors has varied greatly among these countries. The WAEMU Macroeconomic Surveillance Framework would benefit from adjustments to more effectively set the region's public debt on a sustainable path. In addition, beyond adhering to the WAEMU fiscal deficit rule, member countries must curb below-the-budget-line operations. This would require improved monitoring of fiscal risks and the building of adequate budget provisions to address such risks before they materialize. Improved Treasury practices would also help eliminate the recourse to pre-financing arrangements and tighten control over expenditure. Public dissemination of the WAEMU progress report and strengthened peer-to-peer learning among member countries could improve the momentum for reforms.

This book addresses the roles and challenges of people who communicate science, who work with scientists, and who teach STEM majors how to write. In terms of practice and theory, chapters address themes encountered by scientists and communicators, including ethical challenges, visual displays, and communication with publics, as well as changed and changing contexts and genres. The pedagogy section covers topics important to instructors' everyday teaching as well as longer-term curricular development. Chapters address delivery of rhetorically informed instruction, communication from experts to the publics, writing assessment, online teaching, and communication-intensive pedagogies and curricula.

The field of Talent Management has grown and advanced exponentially over the past several years as organizations, large and small, public and private, global and domestic, have realized that to gain and sustain a global competitive advantage, they must manage their talents effectively. Talent Management has become a major theoretical and empirical topic of

intellectual curiosity from various disciplinary perspectives, such as human resource management, arts and entertainment management, international management, etc. This Companion is an indispensable source that provides an authoritative, in-depth, and comprehensive examination of emerging Talent Management topics. Divided into five thematic sections that provide a unique overarching structure to organize forty-one chapters written by leading and renowned international scholars, this Companion assesses essential knowledge, trends, debates, and avenues for future research in a single volume: Evolution and Conceptualization of Talent Management; The External Context of Talent Management; The Internal Context of Talent Management; Individuals, Workforce, and Processes of Talent Management; and Outcomes of Talent Management. In this way, the Companion is essential reading for anyone involved in the scholarly study of Talent Management, including academic researchers, advanced postgraduate and graduate students, and management consultants. For further debate on Talent Management, readers might be interested in the supplementary volume Contemporary Talent Management: A Research Companion, sold separately.

We live on a dynamic Earth shaped by both natural processes and the impacts of humans on their environment. It is in our collective interest to observe and understand our planet, and to predict future behavior to the extent possible, in order to effectively manage resources, successfully respond to threats from natural and human-induced environmental change, and capitalize on the opportunities " social, economic, security, and more " that such knowledge can bring. By continuously monitoring and exploring Earth, developing a deep understanding of its evolving behavior, and characterizing the processes that shape and reshape the environment in which we live, we not only advance knowledge and basic discovery about our planet, but we further develop the foundation upon which benefits to society are built. Thriving on Our Changing Planet presents prioritized science, applications, and observations, along with related strategic and programmatic guidance, to support the U.S. civil space Earth observation program over the coming decade.

Controlling Capital examines three pressing issues in financial market regulation: the contested status of public regulation, the emergence of 'culture' as a proposed modality of market governance, and the renewed ascendancy of private regulation. In the years immediately following the outbreak of crisis in financial markets, public regulation seemed almost to be attaining a position of command – the robustness and durability of which is explored here in respect of market conduct, European Union capital markets union, and US and EU competition policies. Subsequently there has been a softening of command and a return to public-private co-regulation, positioned within a narrative on culture. The potential and limits of culture as a regulatory resource are unpacked here in respect of occupational and organisational aspects, stakeholder connivance and wider political embeddedness. Lastly the book looks from both appreciative and critical perspectives at private regulation, through financial market associations, arbitration of disputes and, most controversially, market 'policing' by hedge funds. Bringing together a distinguished group of international experts, this book will be a key text for all those concerned with issues arising at the intersection of financial markets, law, culture and governance.

The most important element in every election is getting voters to the polls—these get-out-the-vote (GOTV) efforts make the difference between winning and losing office. With the first two editions of *Get Out the Vote*, Donald P. Green and Alan S. Gerber broke ground by introducing a new scientific approach to the challenge of voter mobilization that profoundly influenced how campaigns operate. *Get Out the Vote* has become the reference text for those who manage campaigns and study voter mobilization. In this expanded and updated edition, Green and Gerber incorporate data from more than 100 new studies, which shed new light on the cost-effectiveness and efficiency of various campaign tactics, including door-to-door canvassing, email, direct mail, and telephone calls. Two new chapters focus on the effectiveness of registration drives and messaging tactics. The new *Get Out the Vote* will be available as the country gears up for the 2016 presidential campaign. This readable, practical guide on voter mobilization is sure to be an important resource for consultants, candidates, and grassroots organizations, as well as a valuable teaching tool in courses on campaigns and elections. Praise for Previous Editions: "Green and Gerber have studied turnout for years. Their findings, based on dozens of controlled experiments done as part of actual campaigns, are summarized in... *Get Out the Vote*, which is bound to become a bible for politicians and activists of all stripes." —Alan Krueger in the *New York Times* " *Get Out the Vote* shatters conventional wisdom about GOTV." —Hal Malchow in *Campaigns and Elections* "Green and Gerber's recent book represents important innovations in the study of turnout." — *Political Science Review* "Green and Gerber have provided a valuable resource for grassroots campaigns across the spectrum." — *National Journal*

This theory-to-practice guide offers leading-edge ideas for wide-scale curriculum reform in sciences, technology, engineering, the arts, and mathematics--the STEAM subjects. Chapters emphasize the critical importance of current and emerging digital technologies in bringing STEM education up to speed and implementing changes to curricula at the classroom level. Of particular interest are the diverse ways of integrating the liberal arts into STEM course content in mutually reshaping humanities education and scientific education. This framework and its many instructive examples are geared to ensure that both educators and students can become innovative thinkers and effective problem-solvers in a knowledge-based society. Included in the coverage: Reconceptualizing a college science learning experience in the new digital era. Using mobile devices to support formal, informal, and semi-formal learning. Change of attitudes, self-concept, and team dynamics in engineering education. The language arts as foundational for science, technology, engineering, art, and mathematics. Can K-12 math teachers train students to make valid logical reasoning? Moving forward with STEAM education research. Emerging Technologies for STEAM Education equips educators, education researchers, administrators, and education policymakers with curricular and pedagogical strategies for making STEAM education the bedrock of accessible, relevant learning in keeping with today's digital advances.

This book relies on the conceptual model of Open Government (OG), focusing on transparency and, concretely, in open data initiatives at the local government context with the aim of improving participation and collaboration. Most Open Government models are centered on three pillars: transparency, participation and collaboration. Transparency is a crucial ingredient of OG and, applied to data openness means to ensure that the data are well known, comprehensible, easily accessible and open to all. new governance models based on different open data models have not been proposed up to now. The chapter authors seek to contribute recent research to the discussion on governance models of open data initiatives to support Open Governments with the aim of creating public value. It includes both theoretical and empirical studies on governments models in open data initiatives.

The research team makes the following forecasts: First, in 2013 China's growth will remain stable and reach 8.23 percent, an increase of 0.43 percentage points compared with the previous year; even though there is inflation pressure resulting from global monetary easing, severe inflation in China is unlikely to happen, and the consumer price index (CPI) will remain at 3.11 percent. Second, the growth of imports and exports will rebound, but the trade surplus will decrease further. Finally, the share of investment in GDP will continue to be high in the short term as urbanization promotes the growth of fixed assets investment, though higher per capita incomes will result in high and steady consumption.
