After a first course in trigonometry, the viewpoint must be changed. The sine and other trigonometric functions, originally defined as ratios of lengths of lines, are seen to be highly important functions of analysis, and the sin x should be defined in terms of the variable x by the infinite series as it will be in chapter 6 of this book.

In this book we study the properties of real functions defined on intervals of the real line (possibly the whole real line) and whose image also lies on the real line. In other words, they map $\mathbb{R}$ into $\mathbb{R}$.
