**Treatment**  
About 1 in 5 people (20%) will have lymphoedema of the arm after breast cancer treatment that includes: surgery to remove lymph nodes radiotherapy to the lymph nodes  
If lymphoedema is not treated, it may get worse.

## **Lymphoedema after breast cancer treatment | Cancer Research UK**

Secondary breast cancer. Most breast cancers are discovered at an early stage. But a small proportion of women discover they have breast cancer after it's spread to other parts of the body (metastasis). If this is the case, the type of treatment you have may be different. Secondary cancer, also called "advanced" or "metastatic" cancer, is not curable.

## **Breast cancer in women - Treatment - NHS**

Breast cancer is the most common form of cancer found in elderly women. A woman has a one-in-eight chance of developing breast cancer over her lifetime, according to the National Cancer Institute. The older a woman is, the more likely it is she will be diagnosed with the disease.

## **A Guide to Breast Cancer in Older Adults - Aging.com**

Even though the whole breast is removed during a mastectomy, breast cancer can return to the chest region. This is known as local recurrence. It is also important to note that

## **cancer surgery ...**

Breast cancer is one of the most common cancers in the UK. It affects 1 in 8 women (around 13%) and 1 in 870 men (around 1%) during their lifetime. Ovarian cancer is less common. 1 in 52 women (around 2%) will be diagnosed with ovarian cancer during their lifetime. Many people have someone in their family who is affected by one of these cancers.

## **Inherited breast and ovarian cancer - Macmillan Cancer Support**

If breast cancer spreads, the most common places it can spread to are the bones, lungs, liver or occasionally the brain. Secondary breast cancer may not spread to all or any of these places. Less commonly, breast cancer can spread to other parts of the body, such as the bone marrow or ovaries. Local and regional recurrence
