A top performance expert reveals the secret behind many top athletes and executives: creating a heroic alter ego to activate when the chips are down.

ABOUT THIS BOOK

This book is intended for researchers who want to keep abreast of current developments in corpus-based natural language processing. It is not meant as an

Where To Download Alter

introduction to this field; for readers who need one, several entry-level texts are available, including those of (Church and Mercer, 1993; Charniak, 1993; Jelinek, 1997). This book captures the essence of a series of highly successful work shops held in the last few years.

The response in 1993 to the initial Workshop on Very Large Corpora (Columbus, Ohio) was so enthusiastic that we were encouraged to make it an annual event. The following year, we staged the Second Workshop on Very Large Corpora in Kyoto. As a way of managing these

Where To Download Alter

Annual workshops, we then decided to register a special interest group called SIGDAT with the Association for Computational Linguistics. The demand for international forums on corpus-based NLP has been expanding so rapidly that in 1995 SIGDAT was led to

organize not only the
Third Workshop on
Very Large Corpora
(Cambridge, Mass.)
but also a
complementary
workshop entitled
From Texts to Tags
(Dublin). Obviously,
the success of these
workshops was in
some measure a re-
flection of the growing
popularity of corpus-

based methods in the NLP community. But first and foremost, it was due to the fact that the work shops attracted so many high-quality papers.

This open access book chronicles the rise of a new scientific paradigm offering novel insights into the age-old enigmas of

existence. Over 300 years ago, the human mind discovered the machine code of reality: mathematics. By utilizing abstract thought systems, humans began to decode the workings of the cosmos. From this understanding, the current scientific paradigm emerged, ultimately discovering

the gift of technology.

Today, however, our island of knowledge is surrounded by ever

longer shores of

ignorance. Science

appears to have hit a dead end when

confronted with the

nature of reality and

consciousness. In this

fascinating and

accessible volume,

James Glattfelder

paradigm shift
uncovering the
ontology of reality. It
is found to be
information-theoretic
and participatory,
yielding a

universe.

Henri Lefebvre has considerable claims to be the greatest living philosopher. His work spans some sixty years and includes original work on a

diverse range of subjects, from dialectical materialism to architecture, urbanism and the experience of everyday life. The Production of Space is his major philosophical work and its translation has been long awaited by scholars in many different fields. The

book is a search for a reconciliation between mental space (the space of the philosophers) and real space (the physical and social spheres in which we all live). In the course of his exploration, Henri Lefebvre moves from metaphysical and ideological considerations of the

meaning of space to its experience in the everyday life of home and city. He seeks, in other words, to bridge the gap between the realms of theory and practice, between the mental and the social, and between philosophy and reality. In doing so, he ranges through art, literature, architecture

and economics, and further provides a powerful antidote to the sterile and obfuscatory methods and theories characteristic of much recent continental philosophy. This is a work of great vision and incisiveness. It is also characterized by its author's wit and by anecdote, as well as

by a deftness of style which Donald Nicholson-Smith's sensitive translation precisely captures.
