Overview. NXP's Audio Video  
Bridging (AVB) software  
provides a complete set of  
AVB protocols for use on  
several different NXP  
development boards, reducing  
the need for hardware  
changes and eliminating  
redevelopment costs. For  
applications requiring  
audio, video, and other real  
time content over Ethernet,  
NXP's AVB software provides  
a complete set of AVB  
protocols enabling transport  
and sink services to  
multimedia applications.

An emerging standard that extends Ethernet to support multimedia streaming. The Ethernet Audio/Video Bridging standard adds QoS (Quality of Service) features like time-synchronized low latency streaming services and bandwidth reservation to make it possible to carry audio and video signals on a standard Ethernet line.. Development of the Ethernet Audio/Video Bridging standard is being conducted

~~What is Ethernet Audio/Video  
Bridging? | Webopedia~~

Audio Video Bridging (AVB) is a common name for the set of technical standards which provide improved synchronization, low-latency, and reliability for switched Ethernet networks. AVB embodies the following technologies and standards: IEEE 802.1AS -2011: Timing and Synchronization for Time-Sensitive Applications (gPTP);

Cisco Audio Video bridging  
design From a high-level  
perspective, AVB works by  
reserving a fraction of the  
available Ethernet bandwidth  
for AV traffic. AV streams  
are established upon  
successful reservation of  
bandwidth within latency  
requirements. All the nodes  
in the system share a  
virtual clock.
