Online Auto workshop Management and Accounting System ... The Best Learning Management Systems. The LMS market is expected to be worth over \$15.72 billion in 2021 [1]. The highest proportion of revenue contribution is expected to be generated in North America [2]. 41.7% of global Fortune 500 companies now use some form of educational technology to instruct employees during formal learning

hours [3].

The aim of this book is to link demand and supply of environmental information in the field of Life Cycle Management. The book is based on the results of the CHAINET concerted action financed by EU-DGXII for the work period 1998-2000, and is intended to build bridges between the different scientific communities in the field of Life Cycle Management. A structured approach is followed, meaning that both demand and supply of environmental information are characterised, after which the two are linked.

This volume of the Lecture Notes in Computer Science series contains all the

papersacceptedforpresentationatthe16thIFIP/IEEEInternationalWorkshop on Distributed Systems: Operations and Management (DSOM 2005), which was held at the University Polit` ecnica de Catalunya, Barcelona during October 24— 26, 2005. DSOM 2005 was the sixteenth workshop in a series of annual workshop and it followed the footsteps of highly successful previous meetings, the most - cent of which were held in Davis, USA (DSOM 2004), Heidelberg, Germany (DSOM 2003), Montreal,

Canada (DSOM 2002), Nancy, France (DSOM 2001), and Austin, USA (DSOM 2000). The goal of the DSOM workshop is to bring togetherresearchersintheareasofnetworks, systems, and services management, from both industry and academia, to discuss recent advances and foster future growth in this ?eld. In contrast to the larger management symposia, such as IM (Integrated Management) and NOMS (Network Operations and Management Symposium), the DSOM workshops are organized as single-track programs in order to stimulate interaction among participants.

A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection. A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference, and presented by the students in front of a wider audience. These students also got free access to all other parts of the OTM program, and only paid a heavily discounted fee for the Doctoral Symposium itself. (In fact their attendance was largely sponsored by the other participants!) If evaluated as successful, it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so

draw in an audience of young researchers to the OnTheMove forum. All three main conferences and the associated workshops share the d-tributed aspects of modern computing systems, and the resulting applicati- pull created by the Internet and the so-called Semantic Web. For DOA 2004, the primary emphasis stayed on the distributed object infrastructure; for ODBASE 2004, it was the knowledge bases and methods required for enabling the use of formalsemantics; and for CoopIS2004 themaintopic was the interaction of such technologies and methods with management issues, such as occurs in networked organizations. These subject areas naturally overlap and many submissions in factalsotreatenvisaged mutual impacts among them.

This book constitutes the joint refereed proceedings of seven international workshops held as part of OTM 2004 in Agia Napa, Cyprus in October 2004. The 73 revised papers presented together with 31 abstracts of posters from the OTM main conferences were carefully reviewed and selected from more than 150 submissions. In accordance with the 7 workshops, the papers are organized in topical sections on grid computing and its applications to data analysis; Java technologies for real-time and embedded systems; modeling interorganizational systems; regulatory ontologies; ontologies, semantics and e-learning; PhD symposium; and interoperability.

Electronic media and ICT have become indispensable in the fields of public governance, policy-making and public service provision. Egovernment research demonstrates its relevance to practice, influencing and shaping government strategies and implementations. The way in which technology can enable and enhance public participation in government is of particular importance. This book presents the proceedings of the ongoing research of the IFIP EGOV and ePart conferences, jointly held at Trinity College Dublin, Ireland, in September 2014. Included are 24 ongoing research papers, case studies and posters from the EGOV conference, grouped into the sections: stakeholders and participation; open data and interoperability; ICT-enabled policy-making; services; design, architecture and processes; and evaluation and public values. From the ePart conference, 5 ongoing research papers are included. The book also includes workshops from both conferences. IFIP EGOV and ePart bring together the scientific research community in egovernment from all over the world, and this book will be of interest to all those involved in public governance and service provision.

Includes Part 1, Number 1: Books and Pamphlets, Including Serials and Contributions to Periodicals (January - June)

This book constitutes the refereed proceedings of the 6th International Conference on Industrial Applications of Holonic and Multi-Agent Systems, HoloMAS 2013, held in Prague, Czech Republic, in August 2013, in conjunction with DEXA 2013. The 25 revised full papers presented together with two invited talks were carefully reviewed and selected from 37 submissions. The papers are organized in the following topical sections: MAS in automation and manufacturing; design, simulation and validation; MAS in transportation systems; industrial applications; and new trends.
