Revisiting the Past in Museums and at Historic Sites demonstrates that museums and historic spaces are increasingly becoming "backdrops" for all sorts of appropriations and interventions that throw new light upon the objects they comprise and the pasts they reference. Rooted in new scholarship that expands established notions of art installations, museums,

period rooms, and historic sites, the book brings together contributions from scholars from intersecting disciplines. Arguing that we are witnessing a paradigm shift concerning the place of historic spaces and museums in the contemporary imaginary, the volume shows that such institutions are merging traditional scholarly activities tied to historical representation and inquiry with novel modes of display and interpretation, drawing them closer to the world of entertainment and interactive consumption. Case studies analyze how a range of interventions impact historic spaces and conceptions of the past they generate. The book concludes that museums and historic sites are reinventing themselves in order to remain meaningful

and to play a role in societies aspiring to be more inclusive and open to historical and cultural debate. Revisiting the Past in Museums and at Historic Sites will be of interest to students and faculty who are engaged in the study of museums, art history, architectural and design history, social and cultural history, interior design, visual culture, and material culture.

My goal in writing this book was to provide an introduction to meteorite science and a handbook on meteorite classification. Insofar as I succeeded it should prove useful both to the practicing professional and to university students at the upper-division and

graduate levels. I originally intended the book to be nearly twice as long. The second half was to be a review of properties relating to the origin of each group of meteorites. Chapter XVIII is an example of how these later chapters would have looked, although most would not have been as interpretative. These chapters would have been useful chiefly to meteorite researchers looking for a quick summary of group properties; they were not written because of lack of time. Perhaps I will start to prepare this "second volume" in a year or so when my family and I have recovered from the preparation of the present volume. Although some parts of the classification portion are mildly iconoclastic, I have attempted either to avoid

the inclusion of speculative interpretations or to flag them with a caveat to the reader. I have relaxed these principles somewhat in Chapter XVIII to conserve space, but even there the discussion of alternative speculations should give the reader a feeling for the degree of uncertainty attached.

The story revolves around Takemoto Takeru who lives with his aunt and uncle and their young daughter Mari. Takeru was abandoned by his parents when he was very young and has emotional scars, which he keeps buried within himself. His friend Ryou, who lives alone with his younger sister Kimi has a similar situation in his past and is Takeru's close friend. In school, the two occupy opposite ends of the "popularity scale", with Ryou being popular amongst the girls, where Takeru, well, isn't so popular. Two girls who follow Ryou
