They can present their innovative machineries and new development to the textile leaders through the medium of this print feature that will be circulated to CEOs and top decision makers of textile companies within India and South East Asia. This feature will not only render visibility to their innovations but also act as a positive catalyst of success. In today ' s world, textile manufacturers need to keep upgrading their machineries to stay competitive. In fact, it is the latest machinery that drives the growth of the textile and garment industry by providing efficiency and optimisation in production. To meet customers ' demands and needs, global leaders in textile machineries strive hard to come up with innovative and more efficient textile machines. The newer machines are intelligently designed to give maximum quality and optimum economic efficiency with outstanding features. The trends in shipments of machineries give an indication of which machineries are in demand. Shipments of flat-knitting machines rose by 52 per cent, while deliveries of shuttle-less looms increased by 14 per cent year-on-year in 2015, according to the 38th annual International Textile Machinery Shipment Statistics (ITMSS) released by the International Textile Manufacturers Federation (ITMF). On the other hand, shipments in some textile machinery segments experienced declines in 2015. Deliveries of new short-staple spindles fell by nearly 8 per cent from 2014 to 2015. Shipped long-staple spindles and open-end rotors decreased by 61 per cent and 6 per cent, respectively. The number of shipped draw texturing spindles fell by 26 per cent and shipments for new circular knitting machines by 6 per cent year-on-year. However, 2015 was a very good year for the segment of electronic flat knitting machines as global shipments grew by 52 per cent to 70,100 machines, the highest level since 2011. Not surprisingly, Asia received the highest share of shipments (93 per cent). China remained the world ' s largest investor for flat knitting machines in 2015. Thereby, Chinese investments increased from 19,000 units to 35,500 units. But, due to rising labour and production costs, textile and garment manufacturing is shifting, to a certain extent, from China. As a

result, new plants are being set up in other countries, especially in Asia and Africa. This is where the new machineries would be in demand. ‘ Innovations in Machinery — The CEO Handbook ’ tries to explain the advantages of various machines that will help technocrats in choosing the right machine. This volume is a collection of top most companies that inform readers about the latest innovations in textile machinery. It presents some of the leading machinery entrepreneurs from different textile verticals who have contributed to the textile industry with their innovations. New technologies and techniques in textile production are sure to draw the attention of top textile technocrats. Going beyond, this volume attempts to give a glimpse of the future of textile machinery and production. This handbook will reach the top technocrats in the textile and apparel organisations throughout the world. It will serve as an extensive source of information regarding upcoming technologies and innovations in the global textile machinery industry.

“ There's nothing better than an author who's made all the mistakes herself, has taught hundreds of others, and writes with humor. Chris James fills the bill. This beautiful book talks about knits, rolled hems, and flatlocking. At the end is a trouble-shooting guide....The close-up color photos make her text even more understandable....highly recommended. ” —The Creative Machine. “ The most comprehensive reference on serging to date. ” —Craft & Needlework Age.

Pucker or Puckering is the most used (abused?) term in the garment manufacturing industry. Pick up any quality controllers report, and the first thing that will strike your eye will be “ ...Puckering in armhole, ...Puckering in neckline binding, ...control Puckering in bottom hem... ” the list is endless. Buying office quality controllers are as enamoured of this term as much as manufacturers abhor it. What is it

that makes it so distasteful? Why does it occur? How can it be controlled? While there are numerous leaflets, documents and articles available on pucker, we have found that the majority of them lay great stress on “inherent pucker” (only material parameters). In this booklet we have tried to include process parameters as well as sewing of lightweight fabrics. All said and done, the problem is so intricately interdependent that exhaustive compilation is well nigh impossible. We are sure this booklet will help manufacturers to understand the rationale behind this publication and we will consider our effort successful if enthusiastic readers regularly inform us about newer methods to tackle the problem.

Quilting rulers have long been used by longarm quilters to make uniform shapes while quilting, but now, with the advent of the domestic ruler foot, domestic quilters can join in on the fun, too! Amanda Murphy, best-selling author of the *Free-Motion Quilting Idea Sampler*, starts by showing you how to use 6 basic shapes of machine quilting rulers to lay a foundation for your quilting, then moves on to teaching you 59 different designs. Finish up by following Amanda’s suggestions for filling in the background space with free-motion quilting.

In *First Time Sewing with a Serger*, sewing experts Becky Hanson and Beth Baumgartel take you by the hand and teach you everything you need to know to sew with a serger, or overlock machine—a versatile and speedy stitching tool.
