$y' = 2ax + b$. THE origin is also on the parabola and at $x=0$ the tangent line has slope 0.7. Then $c=0$, so the parabola becomes $y = ax^2 + bx$, with the same derivative. So then $0.7 = 2a(0) + b$ <-- first derivative of the parabola must be 0.7 at $x=0$. $b = 0.7$. The updated equation of the parabola is now $y = ax^2 + 0.7x$.

We begin to see in this collection of works papers in which Maple is used in an increasingly flexible way. For example, there is an application in computer science that uses Maple as a tool to create a new utility. There is an application in abstract algebra where Maple has been used to create new functionalities for computing in a rational function field. There are applications to geometrical optics, digital signal processing, and experimental design.
