Answers

Cathodic protection is a technique used to control the corrosion of a metal surface by making it the cathode of an electrochemical cell. A simple method of protection connects the metal to be protected to a more easily corroded "sacrificial metal" to act as the anode. The

Acces PDF

Cathodic

sacrificial metal then corrodes instead of the protected metal.

For structures such as long pipelines, where passive galvanic cathodic protection is not adequate, an external DC electrical power source is used to provide suffic
