invaluable fast and structured survey of the complete field of veterinary pathology. Now in its second edition, the authors have thoroughly revised, updated and added to both images and text, with the focus still on domestic animals. Each chapter now begins with a short, descriptive text on each body system covered in the atlas. It supports understanding of disease and disease processes by visualizing how cellular pathology, inflammation, circular disturbance and neoplasia are expressed in the different organs and tissues. For this purpose it demonstrates the general morphological reactions of organs and tissues using examples from specific veterinary pathology. Unique and internationally recognized color atlas in veterinary pathology Organized by body systems for easily accessible information Now with 600 high quality illustrations Encompasses all species of domestic animals Takes a comparative approach which provides better understanding of the general mechanisms operating in the different organs Short, comprehensive introductions to every chapter, describing the main patterns of reactivity of each organ and tissue New color photographs enhance the content and provide a better quality photograph from which to learn. Revised descriptions of photographs clearly describe the pictures.

Color Atlas of Equine Pathology offers a practical guide to identifying equine diseases, presenting a single resource with more than 1000 images showing predominantly gross pathology. presenting the disease processes as well as congenital, degenerative, inflammatory, and neoplastic sequences, with text boxes offering quick reference to key information. The book begins with an introductory chapter summarizing the principles of the equine field necropsy, and subsequent organ-based chapters depict gross features of disease, focusing on macroscopic digital images supplemented by histology and immunohistochemistry when necessary. Some clinical information for correlation with pathology is included. Color Atlas of Equine Pathology is an essential resource for diagnostic veterinary pathologists and pathology residents, as well as for equine practitioners performing necropsies in the field. Key features

- Presents more than 1,000 high-quality color images showing primarily gross pathology and significant histopathology and indirect immunohistochemistry
- Aids identification of equine disease, with a user-friendly format to show the correlations between clinical signs and gross and microscopic lesions
- Provides a comparison guide for clinical presentations during or after an equine necropsy
- Offers a synopsis of the principles of the equine field necropsy
- Covers diseases found in the neonate, juvenile, and adult horse
- Focuses on diseases usually found in North America

Part of the highly regarded Diagnostic Pathology series, this updated volume by Dr. Vania Nosé is a visually stunning, easy-to-use reference covering 125 of the most common endocrine pathology diagnoses. Outstanding images—more than 2,400 in all—make this an invaluable diagnostic aid for every practicing

pathologist, resident, or fellow. This second edition incorporates the most recent clinical, pathological, histological, and molecular knowledge in the field to provide a comprehensive overview of all key issues relevant to today's practice. Essential knowledge in all areas of endocrine pathology, including thyroid, parathyroid, pituitary, adrenal, pancreas, skin, and inherited tumor syndromes Unsurpassed visual coverage with more than 2,400 carefully annotated clinical images, gross pathology, histology, and special and immunohistochemical stains that provide clinically and diagnostically important information on typical and variant disease features Designed to help you identify crucial elements of each diagnosis along with associated differential diagnoses and pitfalls to more quickly resolve problems during routine sign out of cases Time-saving reference features include bulleted text, a variety of test data tables, key facts in each chapter, annotated images, and an extensive index Thoroughly updated content throughout, reflecting new WHO classifications for endocrine diseases, recently discovered and newly described endocrine disease entities and genetic causes, and treatment changes of endocrine diseases New coverage of encapsulated follicular variant of papillary thyroid carcinoma (EFVPTC), with a new chapter on the new entity NIFTP, new genetic discoveries in the development of pheochromocytoma and paragangliomas, new names that demonstrate the differentiation of certain tumors, and new information on immunoglobulin G4-related disease (IgG4-RD) involving thyroid
