The BSc Nursing (Adult) degree is taught over three years and each year has three semesters, with 45 weeks of the year either in university or on placement in health and social care settings. In each year you will study 4 modules, one practice learning module and three theory modules, which are divided up throughout the year and distributed equally in terms of time.

Curriculum Development in Nursing Education, Fourth Edition provides nursing students with the theory and practical ideas necessary to develop an evidence-based, context-relevant, unified curriculum.

Written for graduate students and faculty, this new edition responds to the many changes that have occurred in nursing and education since the second edition was published.

All the information you need in one textbook! This all-inclusive text for Nurse Educators delivers comprehensive, evidence-based guidance on the essential components of teaching, including learning theories, teaching methods, new technologies for teaching, curriculum development, evaluation and testing, and accreditation. The text delivers the full scope of knowledge necessary for novice and experienced faculty to become competent teachers in nursing. This third edition features new content on the transition from clinician to educator. There is also a new chapter on nursing professional development and teaching in clinical settings and updated teaching strategies for active learning, clinical judgment, and online teaching. The text is designed to help educators prepare for the certification exams. The text also addresses varied learning styles and how to accommodate them, new developments in simulation, standardized patients, OSCEs, clinical teaching, interprofessional education, and evidence-based teaching. New to the Third Edition: Chapter on the transition from clinician to educator, plus expanded content throughout on becoming a nurse educator Addresses inclusivity and developing an inclusive learning environment for people with different learning styles Strategies to promote active learning, clinical judgment, and higher level learning, and teaching online Updated content on simulations, the use of standardized patients, OSCEs, clinical teaching, and clinical evaluation Chapter on accreditation of nursing programs and developing a systematic program evaluation plan Chapter on nursing professional development and teaching in a clinical setting Key Features: Written by experts who seamlessly integrate evidence-based research and practical strategies Serves as a thorough study guide for nurse educator certification exams Covers practical teaching strategies, simulation, online education, technology, interprofessional education, clinical teaching and evaluation, and test construction Includes case examples and other examples to support content and "how-to" tips Includes a high quality online course ready for an instructor ' s use: sample syllabus, PowerPoints, and a complete 20-module online course

With essential, updated content for novice and experienced nurse educators This evidence-based text delivers the full scope of knowledge necessary for novice and experienced faculty to become competent teachers in nursing. The only book to focus on the full academic role, it encompasses all of the key concepts required for effective teaching, curriculum development, evaluation and testing, becoming a scholar in nursing education, and much more. The second edition is updated throughout and includes four new chapters on Understanding the Learner, Interprofessional Education, Curriculum Models, and Global Nursing Education. It offers new content on role of the nurse educator, learning theories, active learning, flipped class/team-based learning, teaching strategies, teaching in an online nursing course, using new technologies and simulation, clinical teaching and evaluation, test construction, scholarship of teaching, and more. Chapters begin with objectives and conclude with a content summary. Each chapter integrates research and evidence into the text and includes specific examples of the methods and strategies presented, and 'How-to Tips ' for readers. Also available with the book is an online course with sample course syllabus, modules for each chapter, learner activities, discussion forum questions, and Power Point slides. New to the Second Edition: Four new chapters: Understanding the Learner, Interprofessional Education, Curriculum Models, and Global Nursing Education Learning concepts important in teaching Active learning strategies, flipped class/team-based learning Teaching in online nursing courses and programs New technologies and what ' s new in simulation Innovative models of clinical teaching Assessment, evaluation, and test construction Curriculum development and evaluation Scholarship of teaching and becoming a scholar in nursing education Developing partnerships with clinical settings New ancillary with complete online course of 20 modules Key Features: Encompasses current, evidence-based information about the complete academic role—the only text of its kind Delivers key concepts required for effective teaching, curriculum development, evaluation and testing, scholarship, and more Prepares graduate nursing students and nurses transitioning into educator role with essential knowledge and competencies Includes both theoretical and practical information Provides specific examples of content and "how to" tips

"This is a detailed yet practical guide to planning, developing, and evaluating nursing curricula and educational programs. It provides a comprehensive and critical perspective on the totality of variables impacting curricular decisions...This book provides readers with a comprehensive overview of curriculum development, redesign, and evaluation processes...92 - 4 Stars" --Doody's Book Reviews Reorganized and updated to deliver practical guidelines for evidence-based curricular change and development, the fourth edition of this classic text highlights current research in nursing education as a springboard for graduate students and faculty in their quest for research projects, theses, dissertations, and scholarly activities. It also focuses on the specific sciences of nursing education and program evaluation as they pertain to nursing educators. New chapters address the role of faculty regarding curriculum development and approval processes in changing educational environments; course development strategies for applying learning theories, educational taxonomies, and team-building; needs assessment and the frame factors model; ADN and BSN and pathways to higher degrees; and planning for doctoral education. The fourth edition continues to provide the detailed knowledge and practical applications necessary for new and experienced faculty to participate in essential components of the academic role—instruction, curriculum, and evaluation. At its core, the text discusses the importance of needs assessment and evidence as a basis for revising or developing new programs and highlights requisite resources and political support. With a focus on interdisciplinary collaboration, the book addresses the growth of simulation, how to help new faculty transition into the academic role, and use of curriculum in both practice and academic settings. Additionally, the book describes the history and evolution of current nursing curricula and presents the theories, concepts, and tools necessary for curriculum development. Chapters include objectives, discussion points, learning activities, references, and a glossary. New to the Fourth Edition: Reorganized and updated to reflect recent evidence-based curricular changes and developments Highlights current research New chapter: Implementation of Curriculum – Course Development Strategies for the Application of Learning Theories, Educational Taxonomies, and Instruction Team-Building New chapter on Planning for Undergraduate Programs New content on Needs Assessment and the Frame Factors Model New content on Planning for Doctoral Education in Nursing New content on curriculum evaluation, financial support, budget management, and use of evidence Key Features: Supports new faculty as they transition to academe Addresses the need for preparing more faculty educators as defined by IOM report, the ACA, and the Consensus Model Describes the scope of academic curriculum models at every practice and academic level Threads the concept of interdisciplinary collaboration in education throughout Serves as a CNE Certification Review

In an attempt to challenge the prevailing attitudes and images of nursing homes in America, the authors have written a touching book about the people and the relationships that are a part of nursing home care. Their extensive study of and experience with nursing home residents and caregivers reveal that our negative and often painful thoughts about nursing homes are not always well-founded. The authors effectively use monologue and dialogue to take the reader into the world of the nursing home to observe the work of the nursing home staffs, from administrators to housekeepers, as they become surrogate families and friends of the patients. Most moving are the thoughts and words of the residents themselves, especially as they describe their initial horror and anger at being in the nursing home, and their feelings of abandonment and loss of self-esteem. Valuable for both undergraduate and graduate courses in nursing, social work, psychology, death and dying, pastoral care and counseling, this comprehensive volume is useful as a primary or supplementary text. BACKCOVER COPY In an attempt to challenge the prevailing attitudes and images of nursing homes in America, David Oliver and Sally Tureman have written a touching book about the people and the relationships that are a part of nursing home care. Their extensive study of and experience with nursing home residents and caregivers reveal that our negative and often painful thoughts about nursing homes are not always well-founded. The authors effectively use monologue and dialogue to take the reader into the world of the nursing home to observe the work of the nursing home staffs, from administrators to housekeepers, as they become surrogate families and friends of the patients. Most moving are the thoughts and words of the residents themselves, especially as they describe their initial horror and anger at being in the nursing home, and their feelings of abandonment and loss of self-esteem. The Human Factor in Nursing Home Care provides a new and refreshing perspective of those who provide care in nursing homes and those who receive it. And, in the end, it challenges the reader to consider his or her own images of aging and of dying.

The second edition of the current leading nursing text in curriculum development and evaluation continues to serve nurse educators in academic settings as well as in the practice arena. It is a practical guide for developing, revising, and evaluating nursing curricula and educational programs, complete with case studies and details on conducting a needs assessment to determine the extent of revision necessary within current curricula. This text focuses on evidence-based practice, safety and quality assurance concepts, and the role of creative and critical-thinking aspects. It highlights NLN and AACN core competencies in developing and evaluating curricula in all levels of nursing programs. Additionally, it includes a comprehensive list of critical evaluation and accreditation tips, directions on how to prepare for an accreditation visit, and two proposed curricula for nurse educators to consider adapting into educational materials. Key features: Discusses the continuing growth of technology and its application in nursing programs Examines health care reform legislation that is expected to change the way care is delivered Contains updates on the continuing career-ladder and entry-level issues related to nursing Provides details on pedagogical methods, objectives, discussion points, learning activities, and references Includes a glossary of commonly used terms in curriculum development and evaluation This revised edition further examines several major objectives of the text, including major milestones for the past 100 years in the American nursing education system, program review and accreditation processes, and evaluating current trends in nursing education and their role in curriculum development.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

This market-leading resource in holistic nursing is published in cooperation with the American Holistic Nurses Association (AHNA). Each chapter is revised and updated by contributors from the best-selling Fifth Edition, as well as new thought leaders from the field of holistic nursing. Chapters begin with Nurse Healer Objectives that are divided into theoretical, clinical, and personal subject areas, and then conclude with Directions for Future Research and Nurse Healer Reflections to encourage readers to delve deeper into the material and reflect on what they have learned in each chapter. This text is organized by the five core values contained within the Standards of Holistic Nursing Practice: Core Value 1: Holistic Philosophy, Theories, and Ethics Core Value 2: Holistic Caring Process Core Value 3: Holistic Communication, Therapeutic Environment, and Cultural Diversity Core Value 4: Holistic Education and Research Core Value 5: Holistic Nurse Self-Care
