Understanding digital audio. In digital audio recording there are three basic elements involved in the creation of a file: the type of sound signal (audio stream), the type of file format that the sound samples are stored in (container), and the way they are encoded into that format (codec). A codec is a piece of software (and in some cases hardware) used to encode sound signals into a format and enable decoding back to a sound signal you can hear.

An electronic musical instrument is a musical instrument that produces sound using electronic circuitry. Such an instrument sounds by outputting an electrical, electronic or digital audio signal that ultimately is plugged into a power amplifier which drives a loudspeaker, creating the sound heard by the performer and listener. An electronic instrument might include a user interface for controlling its sound, often by adjusting the pitch, frequency, or duration of each note. A common user interfa
