Diverse Similarity by Sharon Rose. Is the first book in a new sci-fi series. Though it could easily be called the first two. The book is in two parts that feel like complete stories in their own right. Each part has a compelling plot and a character development arch. Diverse Similarity is a cerebral sci-fi story. Much like the Star Trek franchise.

Diversity as a Similarity Measure To measure similarity between a target window and a template we ??st ??d for every target patch its Nearest Neighbor (NN), in terms of appearance, in the template. Our key idea is that the similarity between the target and the template is captured by two properties of the implied NN ?'ld.

The inclusion of 'similarity and difference' as a second-order concept within the National Curriculum is essentially concerned with helping students to move beyond stereotypical assumptions about people in the past, to recognise and analyse the diversity of past experience. While some degree of generalisation is essential in making claims about the past, paying attention to the extent of similarity and difference between different sorts of people – and between people within the same ...

Real values of a similarity index must be evaluated relative to the expected maximum value of that index, which is the value obtained for samples randomly drawn from the same universe, with the diversity and sample sizes of the real samples. It is shown that these expected maxima differ from the theoretical maxima, the values obtained for two identical samples, and that the relationship between expected and theoretical maxima depends on sample size and on species diversity in all cases ...

Diversity in the workplace is a hot topic. We hear the word used often, but what does it actually mean? According to the Cambridge English Dictionary, diversity means: the fact of many different types of things or people being included in something; a range of different things or people.

This volume brings together interdisciplinary topics in condensed matter theory and related disciplines, with an emphasis on the common concerns of (mostly) theorists applying advanced many-particle methods in diverse areas: solid state and low temperature physics; atomic, sub-atomic, and statistical physics; engineering sciences, keeping a sharp focus on theoretical developments which cross borders between subfields of condensed matter physics and which provide new approaches to outstanding problems. The book records the fascinating variety of new results associated with the idea of similarity in diversity. In perusing this volume, the reader will be stimulated to discern threads of similarity in the great diversity of physical phenomena and theoretical models proposed to explain them; and indeed there are threads that can be glimpsed in the table of contents, and ramifications of these threads as one reads through the articles. One conclusion is clear: the search for similarity in diversity is a powerful approach to interdisciplinary science.

This book constitutes the proceedings of the 8th International Conference on Similarity Search and Applications, SISAP 2015, held in Glasgow, UK, in October 2015. The 19 full papers, 12 short and 9 demo and poster papers presented in this volume were carefully reviewed and selected from 68 submissions. They are organized in topical sections named: improving similarity search methods and techniques; metrics and evaluation; applications and specific domains; implementation and engineering solutions; posters; demo papers.

Social capital is not only useful for the person who owns it, but it may also foster the integration of a society and the stability of a democracy. Friendly relations, social trust and norms of reciprocity ease the living together in a society and encourage people to take part in democratic decision making. This volume examines the differences in levels, causes and consequences of social capital between 22 European countries surveyed in the 2002 European Social Survey. At first glance, social capital differs strongly between countries. Yet the determinants of social capital differ strongly between European people as well. If one takes account of the latter, the former may no longer appear so large. The volume asks whether this is indeed the case so that a similarity of

countries goes along with a diversity of people. To examine this, multi-level analyses are used in each contribution.

This research level text provides an up-to-date, authoritative review of the methods of measuring biological diversity, as well as the application of these methods.

Current Topics in Management is an annual scholarly journal and this volume is divided into four major sections: Managing Conflict and Justice; Leadership, Social Capital, and Personality; Entrepreneurship and Small Business Management; and Ethics, Learning, and Change. These contributions seek an integration of theory, research, and practice, which is the essential goal of Current Topics in Management. The first section contains two empirical studies on organizational conflict and a theoretical work that addresses the application of organizational justice theory to consumer behavior. The second section contains three empirical studies relating to the leadership language used by senators Hillary Clinton and Barack Obama during the last presidential election, building social capital through leader-member exchanges, and the big-five personality and financial performance of fund managers. Section three contains an essay on revising Phelan's model on entrepreneurship and a case study on a small business organization. The fourth section contains three contributions, two theoretical papers and an empirical study of the administration of state governments. The contributions included are "The Moderating Role of Social Attitudes on the Relationship between Diversity and Conflict" "The Effects of Geographic Dispersion and Team Tenure" "Fairness and Consumer Behavior" "Obama vs. Clinton: Exploring the Impact of Leadership Language" "Social Capital Via Leader" "Financial Performance of Fund Managers" "A Conceptual Framework Linking Entrepreneurs to International New Venture Competitiveness" and "BSL Printing Company: A Case Study."

The explosion in the generation of information parallels the explosion of computational resources. The use of computers to collect, store and manipulate chemical information is at the heart of chemoinformatics. These methodologies, whose main target thus far has been the pharmaceutical field, are general and can be applied to other types of chemical data sets, such as those containing food chemicals. While the use of chemical information methodologies to address food-related challenges is still in its infancy, interest is growing and will continue to do so as the methods prove useful, particularly for providing practical solutions to food industry challenges. Foodinformatics gives an overview of basic concepts, applications, tools and perspectives of the emerging field of foodinformatics. The book is an important addition to the literature and will be of interest of food chemists, nutritionists, informaticians and scientists of related fields. This volume in the Springer Lecture Notes in Computer Science (LNCS) series contains 98 papers presented at the S+SSPR 2008 workshops. S+SSPR 2008 was the sixth time that the SPR and SSPR workshops organized by Technical Committees, TC1 and TC2, of the International Association for Pattern Recognition (IAPR) were held as joint workshops. S+SSPR 2008 was held in Orlando, Florida, the family entertainment capital of the world, on the beautiful campus of the University of Central Florida, one of the up and coming metropolitan universities in the USA. S+SSPR 2008 was held during December 4–6, 2008 only a few days before the 19th International Conference on Pattern Recognition (ICPR2008), which was held in Tampa, only two hours away from Orlando, thus giving the opportunity of both conferences to attendees to enjoy the many attractions offered by two neighboring cities in the state of Florida. SPR 2008 and SSPR 2008 received a total of 175 paper submissions from many different countries around the world, thus giving the workshop an international clout, as was the case for past workshops. This volume contains 98 accepted papers: 56 for oral presentations and 42 for poster presentations. In addition to parallel oral sessions for SPR and SSPR, there was also one joint oral session with papers of interest to both the SPR and SSPR communities. A recent trend that has emerged in the pattern recognition and machine learning research communities is the study of graph-based methods that integrate statistical and structural approaches.
