The larger species of kangaroos have complex, high-crowned teeth. The four permanent molars on each side of both jaws erupt in sequence from front to back and move forward in the jaw, eventually being pushed out at the front. Thus, an old kangaroo may have only the last two molars in place, the first two (and the premolar) having long since been shed.

kangaroo | Characteristics, Habitat, Diet, & Facts ...
The kangaroo is a marsupial from the family Macropodidae (macropods, meaning "large foot"). In common use the term is used to describe the largest species from this family, the red kangaroo, as well as the antilopine kangaroo, eastern grey kangaroo, and western grey kangaroo. Kangaroos are indigenous to Australia and New Guinea.The Australian government estimates that 34.3 million kangaroos ...

Kangaroo - Wikipedia
I always like to tell people that if you don’t see a kangaroo in the wild on your trip to Australia, then you probably didn’t have much more than Bondi Beach and the Opera House on your itinerary.But, if a trip through the outback is a little outside your budget or timeframe, then volunteering at a wild animal sanctuary with kangaroos, is a mighty fine way to get up close and personal with ...
