Overview of acid-base and electrolyte disorders - Summary ...

There are three important modes of homeostasis, which include fluid balance, acid-base balance, and electrolyte balance. In this paper, I discuss some concepts involved in fluid, electrolyte, and acid-base balance. The intracellular fluid (ICF) comprises numerous discrete and minuscule cellular packages.

Fluid, Electrolyte, and Acid-Base Balance
Focus topic: Fluid and Electrolyte and Acid/Base Balance
Cells maintain a balance, or homeostasis, by transference of fluid and electrolytes in and out of the cell. This fluid constantly bathes the cell. Although fluid and electrolyte balance and acid/base balance are separate entities, they directly relate to one another.

Homeostatic mechanisms regulate
parameters such as body fluid volume,
acid–base balance (pH) and electrolyte
concentrations, maintaining a delicate,
dynamic balance which can be
destabilised during illness. In extreme
cases, the fluid or electrolyte deficit or
excess can lead to death.
