Drools Documentation - docs.jboss.org

We are going to look at basic concepts of Drools: Facts – represents data that serves as input for rules; Working Memory – a storage with Facts, where they are used for pattern matching and can be modified, inserted and removed; Rule – represents a single rule which associates Facts with matching actions. It can be written in Drools Rule Language in the .drl files or as Decision Table in ...

As mentioned above, we use Drools as BRMS for jBilling. The BRMS itself is a web application that is deployed as a single 'war' file. Starting with jBilling 2, this web application is included in the main binary package that you get when downloading jBilling. Simply put, when you get jBilling, you already get the Drools GUI pre-installed.
