Why are some countries rich and others poor? David N. Weil, one of the top researchers in economic growth, introduces students to the latest theoretical tools, data, and insights underlying this pivotal question. By showing how empirical data relate to new and old theoretical ideas, *Economic Growth* provides readers with a complete introduction to the discipline and the latest research.

Examining empirical evidence such as how rich are the rich countries, how poor are the poor, and how fast do rich and poor countries grow, noted economist Charles Jones presents major theories of economic growth, from the Nobel Prize-winning work of Robert Solow to new growth theory that has ignited the field in recent years.

This textbook covers the full range of topics and issues normally included in a course on economic growth and development. Both mainstream economic perspectives as well as the multi-paradigmatic, inter-disciplinary, and dynamic-evolutionary perspectives from heterodox economics are detailed. Economic development is viewed in terms of the long-run well-being of humanity, social stability, environmental sustainability, and just distribution of economic gains, not simply as the growth of GDP. Furthermore, this textbook explicitly recognizes the complexity of economic development by linking economic activity to our broader social and

natural environments. The textbook's unique feature is its focus on the natural environment. Both the historical effects of economic development on the environment and the environmental constraints on future economic development are thoroughly discussed in two chapters on environmental issues and policies. In fact, because economic development is defined in terms of economic, social, and environmental sustainability, the natural environment is included in discussions throughout the book. The textbook is inter-disciplinary: knowledge from fields such as sociology, psychology, political science, economic history, and ecology is called on to enhance the economic analysis. A thorough historical account of the development of the principal paradigms of economic development is also included, and the important issues of institutional development and cultural change merit their own chapters. Two chapters on technological change holistically focus on production technologies as well as the dynamic performance of entire economic, social, and ecological systems. Also, the important relationship between economic development and globalization is presented in three chapters on international trade, international finance and investment, and immigration from both orthodox and heterodox perspectives. Latin America is one of the most intriguing parts of the world. The region ' s illustrious history, culture, and geography are famous internationally, but in terms of economics, Latin America has been generally associated with problems. For many, the combination of a resource rich region and poor economic conditions has been a puzzle. This extensively revised and updated second edition of Latin American Economic Development continues to provide the most up to date exploration of why the continent can be considered to have underperformed, how the various Latin American economies function, and the future prospects for the region. The book addresses the economic problems of Latin America theme by theme. Changes and new features in this new edition include: Expanded coverage of how institutions affect economic growth in Latin America Many new boxes and questions for review and discussion New material on how climate change affects the region Updated material to reflect the ongoing macroeconomic stability of the past decade A new chapter on the political economy of Latin America The book provides a comprehensive text for undergraduate economics courses on Latin America, and is also suitable for use by students in other disciplines looking for a wide-ranging guide to the region. This book will continue to be an invaluable resource for

This volume presents a new perspective on demographic transition, economic growth, and national development via exploration of the Third World economies. It provides a multidimensional approach to the close relationship between the concept of the chaos and complexity theory and provides a deliberate glance into the plight of policy formulation for demographic transition, economic growth, and development of Third World countries. The volume discusses the efficiency of good strategies and practices and their impact on business growth and economic growth, depending on the depth and diversity of infrastructure sector in particular and overall socioeconomic development in general. *Economic Growth and Demographic Transition in Third World Nations: A Chaos and Complexity Theory Perspective* covers a conglomeration of various aspects and issues related to the effect of demographic transition on socio-economic development in Third World countries, especially in the post-globalized era. It focuses on the applicability of the chaos and complexity theory in order to elicit transformational policies and aims to discuss and predict future projections of the new world of the economic growth policies.

This textbook by Hendrik Van den Berg on *Economic Growth and Development* presents a long-awaited synthesis of Development Economics and Growth Theory. It also incorporates the recent contributions to our understanding of economic growth from the fields of economic history and the new institutional economics. By basing its analysis on the recent

advances in growth theory, the book offers a unified approach to all episodes of economic growth for countries at all levels of development and throughout history. Students will be comfortable with an analysis that enables them to understand economic growth in their own country as well as in economies very different from their own. The unified theoretical framework greatly facilitates students' understanding of the process of economic growth, and the many cases and examples highlight the fascinating diversity of our world.

This textbook includes discussions of such topics as the environment, the debt case, export-led industrialization, import substitution industrialization, growth theory and technological capability.
