Manometry is used to study the way the muscles of the esophagus contract, and is most useful for investigating dysphagia.

If your main symptom is difficulty swallowing or pain when swallowing, your doctor is likely to order other tests, such as X-rays or upper endoscopy – a procedure by which your doctor can see your upper digestive system with a tiny camera on the end of a tube – before or instead of esophageal manometry. These tests identify or rule out a narrowing, a complete blockage or an area of inflammation in your esophagus.

Esophagitis is inflammation of the esophagus. Acid reflux or certain medications can cause the condition. Symptoms include sore throat or heartburn.

This issue reviews the various techniques and uses of esophageal function testing, including the Bernstein Test, Esophageal Acid Perfusion Test, Esophageal Acidity Test, Esophageal Function Studies, Esophageal Manometry, and Esophageal pH Monitoring. These tests are often used to help determine the cause of frequent heartburn or trouble swallowing and to determine whether chest pain is being caused by a problem with the esophagus.

This issue devoted to Esophageal Function Testing highlights these tests that are complimentary to endoscopy and should be considered after endoscopy is performed. In fact, a prerequisite for performing many of these studies is a negative endoscopy and thus, the endoscopist should be well-informed regarding the indication and utility of these tests. Additionally, some of these newer technologies require endoscopy to be performed during the study as the placement or positioning of the measurement tool will require endoscopic landmarks or direct placement. There have been major advances in most of these older techniques, and new novel measurement paradigms have been created that allow for a more visual and accurate depiction of physiologic and anatomic data. These technologies have evolved to be more akin to an imaging technique and thus, the visual display and data acquisition is much more intuitive and easier to teach to trainees. This review would be of the utmost importance to readers of GI Endoscopy Clinics.
