Essential Mathematics for Economic Analysis, 5th Edition

$f(s) = s^{20} + s^{19} + \dots + s^2 + s - 10 = 0$ has a unique positive solution. Since $f(0) = -10$ and $f(1) = 10$, by the intermediate value theorem (Theorem 7.10.1), there exists a number s between 0 and 1 such that $f(s) = 0$. This s is the unique positive root because $f'(s) > 0$ for all $s > 0$.

Further Mathematics for Economic Analysis is a companion volume to Essential Mathematics
for Economic Analysis intended for advanced undergraduate and graduate economics
students whose requirements go beyond the material found in this text. Do you require just a
couple of additional further topics?

Essential Mathematics for Economic Analysis, 2nd Edition"" "Essential Mathematics for
Economic Analysis, "2nd Edition, provides an invaluable introduction to the mathematical
tools that undergraduate economists need. The coverage is comprehensive, ranging from
elementary algebra to more advanced material, whilst focusing on all the core topics that are
usually taught in undergraduate courses on mathematics for economists. FEATURES An
intelligent approach to teaching mathematics, based on years of experience. Mathematical
rigour and a strong focus on mathematical reasoning. Large selection of worked examples
throughout the book. These are not just specific to economics, as most topics are first dealt
with from a purely mathematical point of view before providing economic insight. Large
number of problems for students to solve. Answers to selected questions included in the back
of the book. CHANGES TO THIS EDITION New Chapter 17 on linear programming. All
chapters revised and updated. Even more economic examples and problem material added.
Extensive resources for students and lecturers on the companion website. 'The book is by far

the best choice one can make for a course on mathematics for economists. It is exemplary in finding the right balance between mathematics and economic examples.' Dr. Roelof J. Stroecker, Erasmus University, Rotterdam. 'The writing style is superb. I found that the style of writing promotes interest and manages to allow intuitive understanding whilst not sacrificing mathematical precision and rigour.' Dr. Steven Cook, University of Wales, Swansea Knut Sydsaeter is a Professor of Mathematics in the Economics Department at the University of Oslo, where, since 1965, he has had extensive experience in teaching mathematics for economists. He has also given graduate courses in dynamic optimization at Berkeley and Gothenborg. He has written and co-authored a number of books, of which several have been translated into many languages. In recent years he has been engaged in an attempt to improve the teaching of mathematics for economists in several African universities. Peter Hammond is a Professor of Economics at Stanford University, where he moved in 1979 after holding the same position at the University of Essex. He completed a BA in Mathematics and a PhD in Economics at the University of Cambridge. He has been an editor of the "Review of Economic Studies," of the Econometric Society Monograph Series, and served on the editorial boards of "Social Choice and Welfare" and the "Journal of Public Economic Theory." He has published more than 90 academic papers in journals and books, mostly on economic theory and mathematical economics. Also available: "Further Mathematics for Economic Analysis" by Sydsaeter, Hammond, Seierstad and Strom (ISBN 0 273 65576 0) "Further Mathematics for Economic Analysis" is a companion volume to "Essential Mathematics for Economic Analysis," It is intended for advanced undergraduate and graduate economics students whose requirements go beyond the material usually taught in undergraduate mathematics courses for economists. It presents most of the mathematical tools that are required for advanced courses in economic theory -- both micro and macro.

ESSENTIAL MATHEMATICS FOR ECONOMIC ANALYSIS Fifth Edition An extensive introduction to all the mathematical tools an economist needs is provided in this worldwide bestseller. " The scope of the book is to be applauded " Dr Michael Reynolds, University of Bradford " Excellent book on calculus with several economic applications " Mauro Bambi, University of York New to this edition: The introductory chapters have been restructured to more logically fit with teaching. Several new exercises have been introduced, as well as fuller solutions to existing ones. More coverage of the history of mathematical and economic ideas has been added, as well as of the scientists who developed them. New example based on the 2014 UK reform of housing taxation illustrating how a discontinuous function can have significant economic consequences. The associated material in MyMathLab has been expanded and improved. Knut Sydsaeter was Emeritus Professor of Mathematics in the Economics Department at the University of Oslo, where he had taught mathematics for economists for over 45 years. Peter Hammond is currently a Professor of Economics at the University of Warwick, where he moved in 2007 after becoming an Emeritus Professor at Stanford University. He has taught mathematics for economists at both universities, as well as at the Universities of Oxford and Essex. Arne Strom is Associate Professor Emeritus at the University of Oslo and has extensive experience in teaching mathematics for economists in the Department of Economics there. Andrés Carvajal is an Associate Professor in the Department of Economics at University of California, Davis.

He has been an editor of the Review of Economic Studies, of the Econometric Society Monograph Series, and has served on the editorial boards of Social Choice and Welfare and the Journal of Public. Essential Mathematics for Economics and Business is established as one of the leading introductory textbooks on mathematics for students of business and economics. Combining a user-friendly approach to mathematics with practical applications to the subjects, the text provides students with a clear and comprehensible guide to mathematics. The fundamental mathematical concepts are explained in a simple and accessible style, using a wide selection of worked examples, progress exercises and real-world applications. New to this Edition Fully updated text with revised worked examples and updated material on Excel and Powerpoint New exercises in mathematics and its applications to give further clarity and practice opportunities Fully updated online material including animations and a new test bank The fourth edition is supported by a companion website at www.wiley.com/college/bradley, which contains: Animations of selected worked examples providing students with a new way of understanding the problems Access to the Maple T.A. test bank, which features over 500 algorithmic questions Further learning material, applications, exercises and solutions. Problems in context studies, which present the mathematics in a business or economics framework. Updated PowerPoint slides, Excel problems and solutions. "The text is aimed at providing an introductory-level exposition of mathematical methods for economics and business students. In terms of level, pace, complexity of examples and user-friendly style the text is excellent - it genuinely recognises and meets the needs of students with minimal maths background." —Colin Glass, Emeritus Professor, University of Ulster "One of the major strengths of this book is the range of exercises in both drill and applications. Also the 'worked examples' are excellent; they provide examples of the use of mathematics to realistic problems and are easy to follow." —Donal Hurley, formerly of University College Cork "The most comprehensive reader in this topic yet, this book is an essential aid to the avid economist who loathes mathematics!" —Amazon.co.uk
