Evolutionary history of life - Wikipedia

The story of evolution is the story of life and how living things have changed and adapted to colonise almost everywhere on Earth. It describes how all living things make up one huge family tree that stretches back billions of years. Our planet Earth, scientists believe, has been around for over 4.5 billion years, give or take 50 million years.

Darwin ' s principle of evolution is summarized by the following facts. All life tends to increase: more organisms are conceived, born, hatched, germinated from seed, sprouted from spores, or produced by cell division (or other means) than can possibly survive. Each organism so produced varies, however little, in some measurable way from its relatives.

An accessible graphic introduction to evolution for the most science-phobic reader Illustrated by the brilliant duo Kevin Cannon and Zander Cannon, this volume is written by the noted comic author and professor of biology Jay Hosler. Evolution features the same characters introduced in the highly regarded The Stuff of Life: A Graphic Guide to Genetics and DNA, now here to explain the fundamentals of the evolution of life on earth. On the heels of explaining to his planetary leader the intricacies of human genetics in The Stuff of Life, the intrepid alien scientist Bloort-183 is charged in this sequel with covering the wider story of evolution. Using the same storytelling conceit that Plenty magazine declared "so charming that you won't even notice you've absorbed an entire scientific field" and that caused Seed to pick The Stuff of Life as a best book of 2008, Evolution brilliantly answers Wired's demand, "What's the solution to America's crisis in science education? More comic books!" Evolution, the most accessible graphic work on this universally studied subject, takes the reader from earth's primordial soup to the vestigial structures, like the coccyx and the male nipple, of modern humans. Once again, the award-winning illustrations of the Cannons render the complex clear and everything cleverly comedic. And in Hosler, Evolution has an award-winning biology teacher whose science comics have earned him a National Science Foundation grant and an interview on NPR's Morning Edition.

At first, nothing lived on Earth. It was a noisy, hot, scary place. Choking gas exploded from volcanoes and oceans of lava bubbled around the globe... Then in the deep, dark ocean, something amazing happened. This is an exciting and dramatic story about how life began and developed on Planet Earth, written especially for younger children. The authors explain how the first living cell was created, and how the cells multiply and create jellyfish and worms, and then fish with bendy necks, which drag themselves out of the water into swampy forests. They tell the story of the biggest creatures that have ever walked on land - the dinosaurs. Long after that, hairy creatures who have babies, not eggs, take over, stand on two legs and spread around the world, some of them living through cataclysmic events such as ice ages and volcanic eruptions. Everyone living today is related to these survivors. With delightful illustrations including lots of detail and humour, all carefully researched and checked, this book shows the development of life on Earth in a truly accessible and simple way. There are millions of different kinds of plants and animals living on the earth. Many millions more lived here in the past. Where did they all come from? Why have some become extinct and others lived on? In this remarkable book for children, Steve

Jenkins explores the fascinating history of life on earth and the awe-inspiring story of evolution, Charles Darwin ' s great contribution to modern science.

Join Ackerley the Acanthostega who takes you on a journey through time to explore the development of life on our wonderful planet, from the earliest organisms of 3.6 billion years ago, through to the arrival of primates 60 million years ago, to modern humans who have been around for less than 200,000 years. Discover: - the giant insects that roamed our planet 440 million years ago - how giant dinosaurs ruled for over 180 million years - how the mass extinction 65 million years ago wiped out nearly all life on Earth - the rise of mammals to become the dominant species With brilliant CGI illustrations, fun diagrams and loads of humor, this book answer's, simply and honestly, the important and fascinating questions about life on Earth and how it evolved.

The theory of evolution unites the past, present, and future of living things. It puts humanity ' s place in the universe into necessary perspective. Despite a history of controversy, the evidence for evolution continues to accumulate as a result of many separate strands of amazing scientific sleuthing. In *The Story of Evolution in 25 Discoveries*, Donald R. Prothero explores the most fascinating breakthroughs in piecing together the evidence for evolution. In twenty-five vignettes, he recounts the dramatic stories of the people who made crucial discoveries, placing each moment in the context of what it represented for the progress of science. He tackles topics like what it means to see evolution in action and what the many transitional fossils show us about evolution, following figures from Darwin to lesser-known researchers as they unlock the mysteries of the fossil record, the earth, and the universe. The book also features the stories of animal species strange and familiar, including humans—and our ties to some of our closest relatives and more distant cousins. Prothero ' s wide-ranging tales showcase awe-inspiring and bizarre aspects of nature and the powerful insights they give us into the way that life works. Brisk and entertaining while firmly grounded in fundamental science, *The Story of Evolution in 25 Discoveries* is a captivating read for anyone curious about the evidence for evolution and what it means for humanity.

Relates the evolution of the family of mankind, from single cells in the sea to human beings with "big brains that wonder who we are."

Award-winning children's book creators Martin Jenkins and Grahame Baker-Smith team up for a large-scale look at our planet, from the big bang to the dinosaurs and beyond. Before humans took their first steps, there were billions of years of vibrant and varied life-forms on Earth. Discover the story of our planet during this time, from the formation of the universe to the first mammals and all the incredible life that flourished in between. Covering ice ages and fossils, the first life in the sea and on land, the time of the dinosaurs, and the rise of mammals, Martin Jenkins navigates through millennia of prehistory in a style both enthralling and accessible. With superb illustrations from Kate Greenaway Medal winner Grahame Baker-Smith, this is a captivating journey through the life of our planet before we called it ours.
