Exchange Server. The Deployment Assistant can help you deploy a new installation of Exchange Server 2013, upgrade a previous version to Exchange 2013, or configure a hybrid deployment of Exchange 2013 and Exchange Online.

Checklist: Perform a new installation of Exchange 2013 ...

Exchange 2013 has been designed for simplicity of scale, hardware utilization, and failure isolation. This has greatly simplified both the deployment process and the implementation of a load balancer.

6. Exchange 2013 Server Roles Exchange 2013 has been consolidated into two roles, these are: the Client Access Server role and the Mailbox Server role.

First of all, even if Exchange 2013 provides services arrays, to ensure high-availability, it does not provide any load balancing mechanism. This means a third party appliance is required to balance traffic amongst CAS Servers and services. The services that can be load-balanced are the ones hosted by the CAS servers as well as SMTP.

Exchange Deployment Assistant

The hardware requirements to deploy
Exchange Server 2013 are similar to the
current Exchange Server 2010 and the
following key points can help you build a
test lab. However, I recommend building
your Exchange Server 2013 lab using the
latest versions or at least most updated
versions of Active Directory and
Operating System.

Exchange Server 2013 delivers a number of new features as well as improvements on existing features that are already familiar to those who have worked with Exchange Server 2010. Here are a few of the highlights: Reduction in server roles from five to three; Client Access server, Mailbox server, and Edge Transport server.
