The study assessed farmers' perception of the effectiveness of University of Nigeria Nsukka-West Africa Agricultural Productivity Programme (UNNWAAPP) training on catfish production around the University of Nigeria catchment area in Enugu State. Purposive sampling technique was used to select 42 respondents across four town communities that ...

Farmers often regard pesticides to be the primary solution to boost their crop productivity, but the farmers increasing dependence on pesticides has attracted little attention in Cameroon. The increased crop productivity is especially appreciated by the small scale farmers, but there is also increasing concern expressed about the health effects of pesticide use within the communities. This study was performed to determine the degree and types of pesticide use, the Buea farmer's reliability on chemicals to control pests, and to assess the knowledge and perception of farmers on pesticide effectiveness and potential health risks.

Agricultural extension system is the central mechanism in the agricultural development process, both in terms of technology transfer and resource development. The development of agriculture is mostly depending upon agricultural extension system. Looking to the prevailing extension system, it is felt that there is a wide gap exist between available agricultural technology and its adoption on farmers field. Perception can be defined as a process by which individual organize and interpret their sensory impressions in order to give meaning to other environment. Therefore, At present various extension education programme are being implemented by State and Central Government, non-Government Organization and State Agricultural Universities and Private agencies. The success or failure of the extension system depend upon how far its clients perceived the same. The perception plays an important role for success or failure of extension system. In this investigation an attempt is made to know the perception of respondents about usefulness of extension system. This Book is specially provide information about the farmers and govt. Gujarat programmed and its effectiveness.

Current, important information on mastitis for all food animal practitioners! Topics will include new perspectives in mastitis control, treatment of clinical mastitis, antimicrobial resistance in mastitis pathogens, the role of diagnostic microbiology in mastitis control programs, update on control of Staph aureus and Strep ag, epidemiology and control of mycoplasma mastitis, managing environmental mastitis, mastitis vaccine strategies, using mastitis records and somatic cell count data, the role of the milking machine in mastitis control, stray voltage and milk quality, communicating and implementing udder health programs, and more!

This paper reports on a detailed sociological study carried out as the NGO (or change agent) was completing three-year projects in two sites, Nagadeepa and Pimburettewa. The study describes the change agent's strategy, and analyzes its impact and the perceptions of farmers and government officials regarding its impact. The case study is placed in a wider context, in terms of both the participatory management policy of the Government of Sri Lanka, and the lessons learned that are relevant for NGOs working in other countries as well.

A changing climate is likely to have a drastic impact on crop yields in Africa. The purpose of this book is to document the effects of climate change on agriculture in Africa and to discuss strategies for adaptation to hotter weather and less predictable rainfall. These strategies include promoting opportunities for farmers to adopt technologies that produce optimal results in terms of crop yield and income under local agro-ecological and socioeconomic conditions. The focus is on sub-Saharan Africa, an area that is already affected by changing patterns of heat and rainfall. Because of the high prevalence of subsistence farming, food insecurity, and extreme poverty in this region, there is a great need for practical adaptation strategies. The book includes empirical research in Ethiopia, Kenya, South Africa, Tanzania, and other Sub-Saharan countries, and the conclusion summarizes policy-relevant findings from the chapters. It is aimed at advanced students, researchers, extension and development practitioners, and officials of government agencies, NGOs, and funding agencies. It also will provide supplementary reading for courses in environment and development and in agricultural economics.
