Fundamentals of Database Systems by Navathe Shamkant B

A database management system (DBMS) is a set of programs that enable database users to create, maintain, and control access to the database. The main objective of a DBMS is to provide an efficient and convenient environment for storage in and retrieval from the database of relevant information. An application program such as an SQL query is used to access the data stored in the data by sending requests to it. A database system supports multiple views of data.
