The purpose of public and community health is to improve the health of populations or groups rather than concentrating on individuals. This book examines the ethical issues associated with public and community health. The contributors analyse the major ethical issues in public health - prioritisation, public participation, health promotion and screening - all of which reflect current practice in the UK. They examine what health services should be available, who should have access to which health services, what are the best strategies for preventing disease, how can professional and public views be reconciled and when can an individual's health needs override the choice of a community. The contributors apply up-to-date ethical theory to practical examples in public health practice to provide a comprehensive and accessible introduction to the key issues in public health ethics.

Halfway between history and philosophy, this book deals with the historical forms that have permitted the understanding of human suffering from the Renaissance to the present. Representation, sympathy, imitation, coherence and narrativity are but a few of the rhetorical recourses that men and women have employed in order to feel our pain.
