Migration and the movement of people is one of the critical issues confronting the world's nations in the twenty-first-century. This book is about the economic contribution of migration to and from New Zealand, one of the most frequently discussed aspects of the debate. Can immigration, in economic terms, be more than a gap filler for the labour market and help as

well with national economic transformation? And what is the evidence on the effect of migration not just on house prices but also on jobs, trade or broader economic performance? Building on Sir Paul Callaghan's vision of New Zealand as a place 'where talent wants to live', this book explores how we can attract skilled, creative and entrepreneurial people born in other countries, and whether our 'seventeenth region' - the more than 600,000 New Zealanders living abroad - can be a greater national asset.

than in any other sector, it is not surprising that the highest valued awards in the history of arbitration come from energy-related arbitrations. Energy disputes often involve complex and controversial issues relating to security, sovereignty, and public welfare. International Arbitration in the Energy Sector puts international energy disputes into a global context, providing broad coverage of different forms and systems of dispute resolution across both renewable and non-renewable sectors. With contributions from leading practitioners, arbitrators, academics, and industry experts from across the globe, the eighteen chapters in the book enable readers to compare the approaches to, and learnings

from, energy arbitrations across various legal systems and geographic regions. After outlining the international energy arbitration legal framework, the text delves into a detailed analysis of the problems which regularly arise in practice. These include, among other things, commercial disputes in Part I (e.g. over the upstream oil sector and long-term gas supply contracts), investor-state disputes in Part II (e.g. under the Energy Charter Treaty), and public international law disputes in Part III (e.g. concerning international boundaries and the distribution of natural resources). Alongside recent developments in the international energy sector, attention is given to climate and sustainable development disputes, which

raise important questions about enforcing sustainability objectives on individuals, corporations, and states. Backed by analyses of arbitral awards, national court and international tribunal decisions, treaties, and other international legal instruments, as well as current events and news in the energy industry, this text offers a unique contribution to international energy literature and provides insightful commentary on the prevalent issues in the field. It is essential reading for any practitioner or researcher in the energy and natural resources sector.

Evidence continues to accumulate indicating that tax havens (as they are familiarly called) account for a staggering multi-trillion-dollar loss of tax revenues worldwide. Yet, as this crucially important book shows, such offshore financial centres (OFCs) represent merely the 'low-hanging fruit' of a massive malaise reaching into every corner of today's global financial services landscape with the so-called New York-London axis at its root. In a biting critique and analysis of the tax and regulatory environments from

which OFCs operate, the author demonstrates that OFC-like features exist in almost every jurisdiction as a virtually inevitable outcome of the transformation of economies worldwide over the past three decades, as nations and economic blocs compete for foreign investments, and as nations seek expansion of markets to accelerate growth. Covered aspects of this phenomenon include the following: the financialization process in global transactions; erosion of credibility in political establishments with regard to their ability to govern from the centre; ultralight regulatory enclaves found in parts of developed countries; public pressure demanding enhanced international cooperation and global tax reforms, now

and educated in their majority, occupied the chief business district and seat of the government in Hong Kong. The protest, known as the Umbrella Movement, called for 'genuine democracy', as well as a fairer social and economic system. The book aims to provide a dynamic framework to explain why socioeconomic forces converged to produce such a situation. Examining increasing inequality, rising prices and stagnating incomes, it stresses the role of economic and social factors, as opposed to the domestic political and constitutional issues often assumed to be the root cause behind the protests. It first argues that globalization and the increasing influence of China's economy in Hong Kong has

weighted on salaries. Second, it shows that the oligopolistic nature of the local economy has generated rents, which have reinforced inequality. The book demonstrates that the younger generation, which is still finding its place in society, has been particularly affected by these phenomena, especially with social mobility at a low point. Offering a new approach to studying the Umbrella Movement, this book will appeal to students and scholars interested in Hong Kong's political landscape, as well Chinese politics more broadly.

Major revelations about the US government's drone program—bestselling author Jeremy Scahill and his colleagues at the investigative website The Intercept expose stunning new details about America's secret assassination policy. When the US government discusses drone strikes publicly, it offers assurances that such operations are a more precise alternative to troops on the ground and are authorized only when an “imminent” threat is present and there is “near

certainty” that the intended target will be killed. The implicit message on drone strikes from the Obama administration has been trust, but don't verify. The online magazine The Intercept exploded this secrecy when it obtained a cache of secret slides that provide a window into the inner workings of the US military's kill/capture operations in Afghanistan, Yemen, and Somalia. Whether through the use of drones, night raids, or new platforms yet to be employed, these documents show assassination to be central to US counterterrorism policy. The classified documents reveal that Washington's fourteen-year targeted killing campaign suffers from an overreliance on flawed signals intelligence, an apparently incalculable

civilian toll, and an inability to extract potentially valuable intelligence from terror suspects. This campaign, carried out by two presidents through four presidential terms, has been deliberately obscured from the public and insulated from democratic debate. The Assassination Complex allows us to understand at last the circumstances under which the US government grants itself the right to sentence individuals to death without the established checks and balances of arrest, trial, and appeal. The book will include original contributions from Glenn Greenwald and Edward Snowden.
