User manual instruction guide for RideControl RCONE Giant Electric Vehicle (KunShan) Co., LTD. Setup instructions, pairing guide, and how to reset.

Represents an exploration of the relationship between imagination and reality as seen through the eyes of the dying Serge Valene, an inhabitant of a large Parisian apartment block.

Steampunk, the retro-futuristic cultural movement, has become a substantial and permanent genre in the worlds of fantasy and science fiction. A large part of its appeal is that, at its core, Steampunk is about doing it yourself: building on the past while also innovating and creating something original. VanderMeer's latest book offers practical and inspirational guidance for readers to find their individual path into this realm. Including sections on art, fashion, architecture, crafts, music, performance, and storytelling, The Steampunk User's Manual provides a conceptual how-to guide that motivates and awes both the armchair enthusiast and the committed creator. Examples range from the utterly doable to the completely over-the-top, encouraging participation and imagination at all levels.

Handbook of Giant Magnetostrictive Materials contains the knowledge that a mechanical or an electrical engineer needs when considering the use of magnetostrictive materials in a construction project. The book covers the physical origin of giant magnetostriction, its manufacturing and metallurgy, and grain related processes under operation. Comprehensive descriptions of useful models of design methods and tools are given, including the performance of devices and systems comprised of magnetostrictive materials, considering the electrical, magnetic, mechanical, and thermal effects. The book covers all major characterization methods of giant magnetostrictive bulk materials, actuators, and systems. A structured inventory of current and emerging applications of giant magnetostrictive materials is given, covering areas such as sound and vibration sources, vibration control, motional control, material processing, and electromechanical converters. The final chapter offers an up-to-date review of the emerging giant magnetostrictive thin film technologies. The book also contains a market inventory with valuable contact information. Offers all necessary information for the reader to decide on the applicability of giant magnetostrictive material in a construction Allows readers to create their own computational design tools based on the model algorithms given in the book; specific programs are also proposed Gives the reader numerous pieces of advice and hints regarding the further details of construction design, pre-and detail engineering Provides the reader with information necessary to perform the needed experimental evaluation of materials and actuators in specific applications Guides the reader through current and potential areas of successful applications of giant magnetostrive materials Supplies the reader with the necessary contact information to act in the field of giant magnetostrictive materials applications

This book presents the results of an interdisciplinary research project that was set up to introduce Integrated Water Resources Management (IWRM) at the Zayandeh Rud, Central Iran's most important river. As a result of climate change and a missing overall concept for sustainably managing water resources, the river has repeatedly dried up in recent years. Not only has water stress led to severe conflicts among the water using sectors and neighboring provinces, it also threatens important ecosystems in the region. Thus, the joint development of an IWRM concept for the Zayandeh Rud catchment was the main objective of the project. Comprehensive technological and non-technological measures – ranging from wastewater reuse to capacity development – were adjusted to local conditions and implemented in order to initiate an integrated, iterative IWRM process. The design of a technology-based Water Management Tool (WMT) served as the connective link to create trust, cooperation and coordination among the stakeholders and institutions.
