Gonja A Phonological And Grammatical Study

The Gonja language is a North Guang language spoken by an estimated 230,000 people, almost all of whom are of the Gonja ethnic group of northern Ghana. Related to Guang languages in the south of Ghana, it is spoken by about a third of the population in the northern region. The Brong-Ahafo and Volta regions lie to the south of the Gonja-speaking area, while Dagombas, Mamprussis and Walas are to the north. Its dialects are Gonja and Choruba.

Phonological Variation in the Jamaican Continuum ...

One of the crucial ways in which prosodic structure governs the distribution of segments is in terms of sonority. By taking into account what is known as the sonority of segments, their arrangement within the syllable follows a clear pattern: the most sonorous segment occupies the peak position, while the less sonorous ones occur towards the margins, as observed in a wide range of ...

The language is relatively homogeneous, with only slight phonological, lexical, and grammatical variations. Linguistically, its nearest relatives is the Bozo language, which is centered on the Inner Niger Delta. It is possible that the language of the Imraguen people and the Nemadi dialect are dialects of Soninke. Phonology Consonants

"[A] very useful resource, not only for psychologists and education professionals, but universally, for all those experts interested in multicultural assessment." --Heikki Lyytinen, PhD Professor of Developmental Neuropsychology University of Jyväskylä, Finland This volume provides a thorough and provocative examination of how different cultures measure intelligence and skill, why they use the tools they use, and how their assessment methods are changing in the globalizing world. The contributors discuss the extent to which methods of assessment are limited and culture-bound. These methods must be revised and adapted to become relevant to foreign cultures. To this end, this book uses theoretical models and empirical studies to explore the use and validity of standardized tests, language and literacy tests, job

interviews, and other methods of assessment across various cultures from both developed and developing countries. Key topics include: National and international standards and guidelines for test development and use Limitations of Western assessment tools for populations in the developing world The challenges of measuring abilities and competencies in Hispanics/Latinos Developing and adapting language and literacy assessments in Arabic-speaking countries Assessing competencies in reading and mathematics in Zambian children

Frontiers of Phonology is a collection of essays that present a selective overview of trends in the linguistic analysis of sound structure. The essays are written by specialists from Europe, Canada and the USA and discuss issues from three broad areas of phonology: the nature and representation of phonological features; the role and structure of the skeletal tier and syllable structure; and the competing claims of derivational and declarative approaches to phonology. The book provides a forum for lively discussion of important theoretical topics from various standpoints including metrical and autosegmental phonology, dependency phonology and declarative phonology. The contributors, who are protagonists of these different standpoints, compare notes and show the merits of their different approaches. The essays discussing derivational issues offer an excellent introduction to the area of constraints based phonology, and by covering the phonology of many languages the book provides an understanding of how human languages in general use sound.

Phonology - the study of how the sounds of speech are represented in our minds - is one of the core areas of linguistic theory, and is central to the study of human language. This handbook brings together the world's leading experts in phonology to present the most comprehensive and detailed overview of the field. Focusing on research and the most influential theories, the authors discuss each of the central issues in phonological theory, explore a variety of empirical phenomena, and show how phonology interacts with other aspects of language such as syntax, morphology, phonetics, and language acquisition. Providing a one-stop guide to every aspect of this important field, The Cambridge Handbook of Phonology will serve as an invaluable source of readings for advanced undergraduate and graduate students, an informative overview for linguists and a useful starting point for anyone beginning phonological research.

First published in 1998. Part of the Outstanding Dissertations in Linguistics series, this work looks at the analysis of elision directionality and the correlation between the active value of (ATR) in a language and the language's vowel inventory. The paper develops the idea of ATR Predictability.

The Handbook of African Linguistics provides a holistic coverage of the key themes, subfields, approaches and practical application to the vast areas subsumable under African linguistics that will serve researchers working across the wide continuum in the field. Established and emerging scholars of African languages who are active and current in their fields are brought together, each making use of data from a linguistic group in Africa to explicate a chosen theme within their area of expertise, and illustrate the practice of the discipline in the continent.

Causatives and Causation is the first comprehensive study of causative constructions found in the world's languages. This important new research, based on a data base of more than 600 languages, not only investigates fully the richness and variety of causative types, but also presents an alternative perspective to the traditional typological approach. The new typology enables a better understanding of how the human mind cognizes causation and how this is reflected in language. Causatives and Causation is also an important attempt to integrate language typology with diachrony by constructing a diachronic model of causative affixes on the basis of this new typology. Drawing on the theoretical insight of Role and Reference Grammar, this book provides a case study of the causative constructions in Korean, providing additional support for both the proposed new typology and the diachronic model. It also examines the

pragmatic foundations of causatives, an important but previously unexplored area of study.

The first serious typological survey of the lenition process in modern phonological literature.

This book developed out of a survey course on African languages that Uriel Weinreich invited the author to teach at Columbia University. The focus of the course changed considerably in the years that the author taught the course (1964-1968), in large part to accommodate the interests of many students without a background in linguistics but registered for the course. The one thing African languages have in common, setting them off from all the other languages in the world, is the fact that they are spoken in Africa.
