aqueous solution, can be determined by precipitation of the chloride ion as silver chloride:
$$\text{Ag}^+(\text{aq}) + \text{Cl}^-(\text{aq}) \rightarrow \text{AgCl}(\text{s})$$
The silver chloride precipitate initially forms as a colloid, which is coagulated with heat.

Gravimetric Analysis of Chloride in Solution Lab Report

Introduction: The purpose of this experiment is to determine the identity of a chloride-containing solute by reacting it with silver nitrate and producing some quantity of silver chloride to determine the amount of chloride in the sample.

Gravimetric Determination of Chloride | Lab Report
Gravimetric analysis, in short, involves changing one compound containing the constituent into another compound containing that constituent and measuring the percent chloride in the new compound to determine the percent chloride in the previous compound. In this experiment, silver chloride will be produced

7: Gravimetric Analysis (Experiment) - Chemistry LibreTexts

Gravimetric analysis, which by definition is based upon the measurement of mass, can be generalized into two types; precipitation and volatilization. The quantitative determination of a substance by the precipitation method of gravimetric analysis involves isolation of an ion in solution by a precipitation

Sub Answer
salt chloride content is easy to find because it is slightly soluble, making it possible to turn it into a precipitate. A precipitate reaction can be done using silver to isolate the specific ion.

Chem 1001 gravimetric analysis of a chloride salt Example ...
An example of a gravimetric analysis is the determination of chloride in a compound. In order to do a gravimetric analysis, a cation must be found that forms an insoluble compound with chloride. This compound must also be pure and easily filtered. The solubility rules indicate that Ag^+ , Pb^{2+} , and Hg_2^{2+} form insoluble chlorides.
