States of matter
are
distinguished by
changes in the

Access Free Heat And States

properties of matter associated with external factors like pressure and temperature. States are usually distinguished by a discontinuity in one of those properties: for example, raising the temperature

Heat has an impact on the state of matter. Matter can change state based on heat or temperature. There are three states that

Access Free Heat And States

Of Matter can take
Depending on its
temperature:
solid, liquid,
and gas. For
example, if
water is cold
and its
molecules are
moving very
slow, it will be
a solid (ice).
