Just like physical film and analog video, a digital video stream is made up of individual frames, each one representing a time slice of the scene. Films display 24 frames per second, and American video presents 30 frames in that same time span, known as the frame rate. The higher the number of frames in any given second, the smoother the video will appear.

Instead of broadcasting it, however, the VCR sends it straight to the TV.

Understanding Analog TV - How Digital Television Works ...

Analog television is the original television technology that uses analog signals to transmit video and audio. In an analog television broadcast, the brightness, colors and sound are represented by amplitude, phase and frequency of an analog signal. Analog signals vary over a continuous range of possible values which means that electronic
