### ~~Hybridization Chemistry~~

Hybridization When thinking of chemical bonds, atoms do not use atomic orbitals to make bonds but rather what are called hybrid orbitals . Understanding the hybridization of different atoms in a molecule is important in organic chemistry for understanding structure, reactivity, and

## Hybridization Chemistry

Let's say you are asked to determine the hybridization state for the numbered atoms in the following molecule: The first thing you need to do is determine the number of the groups that are on each atom. By groups, we mean either atoms or lone pairs of electrons. This is also known as the Steric Number (SN).
