This book provides the reader with basic tools to solve problems of electromagnetism in their natural functional frameworks thanks to modern mathematical methods: integral surface methods, and also semigroups, variational methods, etc., well adapted to a numerical approach. As examples of applications of these tools and concepts, we solve several fundamental problems of electromagnetism, stationary or time-dependent: scattering of an incident wave by an obstacle, bounded or not, by gratings; wave propagation in a waveguide, with junctions and cascades. We hope that mathematical notions will allow a better understanding of modelization in electromagnetism and emphasize the essential features related to the geometry and nature of materials. Contents.Mathematical Modelling of the Electromagnetic Field in Continuous Media: Maxwell Equations and Constitutive RelationsMathematical Framework for ElectromagnetismStationary Scattering Problems with Bounded ObstaclesWaveguide ProblemsStationary Scattering Problems on Unbounded ObstaclesEvolution ProblemsAppendix I Differential Geometry for ElectromagnetismReferencesIndexNotations Readership: Applied mathematicians. keywords:Electromagnetism;Mathematical Modelling;Maxwell Equations;Variational Methods;Differential Geometry;Hodge Decomposition;Impedance Operators;Calderon Operators;Waveguides;Scattering;Outgoing Waves;Causal Problems I would recommend it to anyone interested in the analysis or numerical analysis of Maxwell's equations for its up-to-date and extensive treatment of the problem.: SIAM Reviews

Poetry. "Anne-Adele Wight's OPERA HOUSE ARTERIAL pursues a critical mass of opera houses. Opera house to draw borders. Opera house to recognize neighbors. Opera house to perform and invent. Opera house to illustrate the elemental. In these poems, one's own opera house is taken up in Wight's invitation to 'discuss and debate as a group exercise.' Wight takes seriously the work of setting the stages, orchestrating the scores, and cueing the voices. She does not forget to acknowledge their limits."Michelle Taransky "Drawn to water, we chase ourselves as anything. So cities, or insistent return to the arteries;here, in Wight's work, bright red blood as music. There, the opera house again, planetary: poem as through street, getting you where you need to go. Roam this globe, astral debris."Ryan Eckes

Utilizing research on networked struggles in both the 18th-century Atlantic world and our modern day, Resistance, Space and Political Identities: The Making of Counter-Global Networks challenges existing understandings of the relations between space, politics, and resistance to develop an innovative account of networked forms of resistance and political activity. Explores counter-global struggles in both the past and present;including both the 18th-century Atlantic world and contemporary forms of resistance Examines the productive geographies of contestation Foregrounds the solidarities and geographies of connection between different place-based struggles and argues that such solidarities are essential to produce more plural forms of globalization

If you're looking for construction projects for QRP transmitters, receivers and accessories, look no further. Experience first-hand the thrill of making contacts using equipment that you built!
