immune system disease chapter 35 Flashcards and Study Sets ...

Active immunity results when exposure to a disease organism triggers the immune system to produce antibodies to that disease. Exposure to the disease organism can occur through infection with the actual disease (resulting in natural immunity), or introduction of a killed or weakened form of the disease organism through vaccination (vaccine-induced immunity).

Types of Immunity to a Disease | Vaccines and ...

In biology, immunity is the capability of multicellular organisms to resist harmful microorganisms. Immunity involves both specific and nonspecific components. The nonspecific components act as barriers or eliminators of a wide range of pathogens irrespective of their antigenic make-up. Other components of the immune system adapt themselves to each new disease encountered and can generate pathogen-specific immunity. Immunity can be defined as a complex biological system endowed with the capacity

J.R. Rodgers, in Encyclopedia of Microbiology (Third Edition), 2009. Introduction. Immunity is an extensive topic, worthy of an encyclopedia of its own. Here we cannot summarize the field in detail, but will identify key concepts. These concepts include (1) the difference between innate and acquired immunity and how they relate to each other; (2) the notions of specificity and immune memory ...

Immunity - an overview | ScienceDirect Topics

The immune system is a host defense system comprising many biological structures and processes within an organism that protects against disease. To function properly, an immune system must detect a wide variety of agents, known as pathogens, from viruses to parasitic worms, and distinguish them from the organism's own healthy tissue.

Immune system - Wikipedia

Infectious disease - Infectious disease - Natural and acquired immunity: Every animal species possesses some natural resistance to disease. Humans have a high degree of resistance to foot-and-mouth disease, for example, while the cattle and sheep with which they may be in close contact suffer in the thousands from it. Rats are highly resistant to diphtheria, whereas unimmunized children ...
