insurance risks, looks at life insurance in the United States and ALM in insurance. It addresses the questions and concerns of investment banks, brokerage firms and the insurance/reinsurance sector itself, examines ongoing trends and issues, and how current market pressures on insurance companies do not just create challenges but actually point the way to future promising developments.

The paper reviews the principles of financial intermediation in insurance from the perspective of its functions in the financial system and assesses the effect of financial innovation on insurance functions. Insurance core function is managing risks driven by nature or related to human life. To support it, insurance companies perform the functions of pooling of resources, transferring of resources, and information production and management. Four major financial innovations affected the insurance business: hedging of market risks with derivatives, securitization of underwriting risks, asset management and credit intermediation activities of the shadow banking. While hedging of market risks with derivatives and securitization of underwriting risks enhanced industry effectiveness to perform its core functions, asset management and shadow banking activities introduced new functions of supporting the payment system and asset prices. In performing new functions, insurers compete with other financial intermediaries and markets. The analysis implies that an economic activity rather than a legal entity needs to be the basis of systemic risk regulation framework in insurance. This would also provide a coherent framework to regulate various intermediaries involved in economically equivalent activities.

Praise for Structured Finance & Insurance "More and more each year, the modern corporation must decide what risks to keep and what risks to shed to remain competitive and to maximize its value for the capital employed. Culp explains the theory and practice of risk transfer through either balance sheet mechanism such as structured finance, derivative transactions, or insurance. Equity is expensive and risk transfer is expensive. As understanding grows, and, as a result, costs continue to fall, ART will continue to replace equity as the means to cushion knowable risks. This book enhances our understanding of ART." --Myron S. Scholes, Frank E. Buck Professor of Finance, Emeritus, Graduate School of Business, Stanford University "A must-read for everyone offering structured finance as a business, and arguably even more valuable to any one expected to pay for such service." --Norbert Johanning, Managing Director, DaimlerChrysler Financial Services "Culp's latest book provides a comprehensive account of the most important financing and risk management innovations in both insurance and capital markets. And it does so by fitting these innovative solutions and products into a single, unified theory of financial markets that integrates the once largely separated disciplines of insurance and risk management with the current theory and practice of corporate finance." --Don Chew, Editor, Journal of Applied Corporate Finance (a Morgan Stanley publication) "This exciting book is a comprehensive read on alternative insurance solutions available to corporations. It focuses on the real benefits, economical and practical, of alternatives such as captives, rent-a-captive, and mutuals. An excellent introduction to the very complex field of alternative risk transfer (ART)." --Paul Wohrmann, PhD, Head of the Center of Excellence ART and member of the Executive Management of Global Corporate in Europe, Zurich Financial Services "Structured Finance and Insurance transcends Silos to reach the Enterprise Mountaintop. Culp superbly details integrated, captive, multiple triggers and capital market products, and provides the architectural blueprints for enterprise risk innovation." --Paul Wagner, Director, Risk Management, AGL Resources Inc.

This edited conference volume provides a rich survey of current scholarly and professional thinking about the state of financial innovations and innovators and their diffusion across national boundaries, as well as the welfare-enhancing implications for firms and nation-states. Like the engineering and practice of financial innovation itself, Financial Innovation and the Welfare of Nations is interdisciplinary and international in scope. Leading academics and professionals in economics, finance, strategic management, and law offer their latest thinking on: Financial innovations and the dynamics of emerging

capital markets; First-mover advantages and disadvantages with financial innovations; Modeling banking deregulation and systemic risk; Identifying 'blue-chip' investments in 'frontier' equity markets; Piercing the 'sovereign ceiling' with cross-border securitization; Credit derivatives and economic restructuring; and Insurance derivatives and the convergence of the banking and insurance industry.

The central question addressed in *Financial Innovations and the Welfare of Nations* is how the transfer of financial innovations from developed to developing economies can nurture the dynamics of emerging capital markets. National capital markets can be positioned along a continuum ranging from embryonic to mature and emerged markets according to a decreasing "national cost of capital" criterion. In the introductory chapter Laurent Jacque argues that newly emerging countries are handicapped by a high cost of capital due to "incomplete" and inefficient financial markets. As capital markets graduate to higher level of "emergedness", their national firms avail themselves of a lower cost of capital that makes them more competitive in the global economy and spurs economic growth. Skillful transfer of financial innovations to emerging markets often encourages the deregulation of the country's financial services sector. This results into new conduits for a more efficient capital allocation process such as commercial paper, securitized consumer finance and other disintermediated modes of financing which out-compete traditional financial intermediaries (mostly commercial banks), reduce households' cost of living and conjointly fuel the dynamics of emerging markets. Our response to the central question of how the transfer of financial innovations can enhance the Wealth of Nations is to show that it reduces the cost of capital while not unduly increasing systemic risk. Part I examines the relationship between financial innovations and systemic risk of the international financial system.

Securitized Insurance Risk is one of the first books to focus exclusively on the convergence of the insurance and financial markets in risk management and the emergence of insurance risk as a non-correlated asset class. Written for insurers and investors alike, this book explores the opportunities available to forward-looking risk and investment managers. Chapters by prominent experts specifically address: the win-win principle behind securitizing insurance risk; current structures, including catastrophe bonds, structured notes, catastrophe options, and swaps; partnering financial market tools with traditional reinsurance programs; holding insurance risk, uncorrelated with stocks and bonds; pricing insurance risk instruments and evaluating basic risk; and regulatory and accounting concerns.

An in-depth look at the best ways to navigate the post-reform world of derivatives and futures The derivatives market is one of the largest, and most important financial markets in the world. It's also one of the least understood. Today we are witnessing the unprecedented reform and reshaping of this market, and along with these events, the entire life cycle of a derivatives transaction has been affected. Accordingly, nearly all market participants in the modern economy need to view the handling of risk by derivatives in a very different way. Many aspects of financial services reform are based on a belief that derivatives caused the Great Recession of 2008. While the difficulties we now face cannot be blamed solely on derivatives, the need to understand this market, and the financial products that trade within it, has never been greater. The *Post-Reform Guide to Derivatives and Futures* provides straightforward descriptions of these important investment products, the market in which they trade, and the law that now, after July 16, 2011, governs their use in America and creates challenges for investors throughout the world. Author Gordon Peery is an attorney who works exclusively in the derivatives markets and specializes in derivatives and futures reform and market structure. Since representing clients in Congressional hearings involving Enron Corp., he has

developed extensive experience in this field. With this guide, he reveals how derivatives law, and market practice throughout the world, began to change in historic ways beginning in 2011, and what you must do to keep up with these changes. Explains what derivatives and futures are, who trades them, and what must be done to manage risk in the post reform world Accurately reflects the futures and derivatives markets as they exist today and how they will be transformed by the Dodd-Frank Wall Street Reform and Consumer Protection Act Highlights the risks and common disputes regarding derivatives and futures, and offers recommendations for best practices in light of the evolving law governing derivatives The financial crisis has changed the rules of Wall Street, especially when it comes to derivatives and futures. The Post-Reform Guide to Derivatives and Futures will help you navigate this evolving field and put you in a better position to make the most informed decisions within it.

A practical approach to ART-an alternative method by which companies take on various types of risk This comprehensive book shows readers what ART is, how it can be used to mitigate risk, and how certain instruments/structures associated with ART should be implemented. Through numerous examples and case studies, readers will learn what actually works and what doesn't when using this technique. Erik Banks (CT) joined XL Capital's weather/energy risk management subsidiary, Element Re, as a Partner and Chief Risk Officer in 2001.
