InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects.

After more than three decades of economic malaise, many African countries are experiencing an upsurge in their economic fortunes linked to the booming international market for minerals. Spurred by the shrinking viability of peasant agriculture, rural dwellers have been engaged in a massive search for alternative livelihoods, one of the most lucrative being artisanal mining. While an expanding literature has documented the economic expansion of artisanal mining, this book is the first to probe its societal impact, demonstrating that artisanal mining has the potential to be far more democratic and emancipating than preceding modes. Delineating the paradoxes of artisanal miners working alongside the expansion of large-scale mining investment in Africa, *Mining and Social Transformation in Africa* concentrates on the Tanzanian experience. Written by authors with fresh research insights, focus is placed on how artisanal mining is configured in relation to local, regional and national mining investments and social class differentiation. The work lives and associated lifestyles of miners and residents of mining settlements are brought to the fore, asking where this historical interlude is taking them and their communities in the future. The question of value transfers out of the artisanal mining sector, value capture by elites and changing configurations of

gender, age and class differentiation, all arise.

Today, India's education sector remains a victim of poor policies, restrictive regulations and orthodoxy. Despite being enrolled in schools, children are not learning adequately. Increasingly, parents are seeking alternatives through private inputs in school and tuition. Students are dropping out from secondary school in spite of high financial returns of secondary education, and those who do complete it have inferior conceptual knowledge. Higher education is over-regulated and under-governed, keeping away serious private providers and reputed global institutes. Graduates from high schools, colleges and universities are not readily employable, and few are willing to pay for skill development. Ironically, the Right to Education Act, if strictly enforced, will result in closure of thousands of non-state schools, and millions of poor children will be left without access to education. Eleventh in the series, India Infrastructure Report 2012 discusses challenges in the education sector — elementary, secondary, higher, and vocational — and explores strategies for constructive change and opportunities for the private sector. It suggests that immediate steps are required to reform the sector to reap the benefits from India's 'demographic dividend' due to a rise in the working age population. Result of a collective effort led by the IDFC Foundation, this Report brings together a range of perspectives from academics, researchers and practitioners committed to enhancing educational practices. It will be an invaluable resource for policymakers, researchers and corporates.
