The book first covers the classical ensembles of statistical mechanics and stochastic processes, including Brownian motion, probability theory, and the Fokker-Planck and Langevin equations. To illustrate the use of statistical methods beyond the theory of matter, the author discusses entropy in information theory, Brownian motion in the stock market, and the Monte Carlo method in computer ...

When  $X=0$ , the solution is  $f_h = \text{Fro}/4y$  For weak source ( $A \neq 0$ ) we write  $m = m + im$ , and keep only terms to first order in  $\epsilon$  The equation becomes  $(\nabla^2 + 2r) \psi(x) = 800$  Thus, the solution is of the form as for  $r > 0$ , except
