Kinematics and kinetic analysis of the slider-crank ...

The slider-crank mechanism shown is driven by the combustion process that occurs above the piston at C. This combustion process generates a time-dependent force $P(t)$ which drives the piston down. The motion of the piston drives the crankshaft at A around by way of the connecting rod BC. In addition, there is a "resistance" torque generated at the crank due to frictional and load resistance applied to the crankshaft.

link mechanism with three revolute joints and one prismatic, or sliding, joint. The rotation of the crank drives the linear movement the slider, or the expansion of gases against a sliding piston in a cylinder can drive the rotation of the crank. There are two types of slider-cranks: in-line and offset. In-line: An in-line slider-crank has its slider positioned so the line of travel of the hinged joint of the slider passes through the base joint of the crank. Thi

The slider-crank mechanism, which has a well-known application in engines, is a special case of the crank-rocker mechanism (Figure 3). Notice that if rocker in Figure is very long, it can be replaced by a block sliding in a curved slot or guide as shown. If the length of the rocker is infinite, the guide and block are no longer curved.

An in-line slider-crank has its slider positioned so the line of travel of the hinged joint of the slider passes through the base joint of the crank. This creates a symmetric slider movement back and forth as the crank rotates. Offset If the line of travel of the hinged joint of the slider does not pass through the base pivot of the crank, the slider movement is not symmetric. It moves faster in one direction than the other. This is called a quick-return mechanism.

The slider-crank mechanism is assembled in SolidWorks in a slightly different way. Because one of the objectives in SolidWorks assembly is to conduct kinematics analysis of the mechanism, as illustrated in Figure 5.15 (a), a bearing part is introduced and is fixed in the assembly, as shown in Figure 5.15 (b).
