Experimentally find the angular frequency of a simple harmonic oscillator and compare this with the theoretical value. Use the Fast Fourier Transform (FFT) function to find the peak frequency. Experimentally test the relationship between the mass of the object and the angular frequency of the oscillator.

Simple Harmonic Motion. Simple harmonic motion (SHM) is the motion of an object

## Read Online Lab 8 Simple Harmonic Motion

subject to a force that is proportional to the object's displacement. One example of SHM is the motion of a mass attached to a spring. In this case, the relationship between the spring force and the displacement is given by Hooke's Law,  $F = -kx$ , where  $k$  is the spring constant,  $x$  is the displacement from the equilibrium length of the spring,

## Read Online Lab 8 Simple Harmonic Motion

and the minus sign indicates that the force opposes the displacement.

then the motion of the pendulum will be simple harmonic motion and its period can be calculated using the equation for the

# Read Online Lab 8 Simple Harmonic Motion

period of simple harmonic motion  $T = 2\pi \sqrt{m/k}$ . (2) It can be shown that if the amplitude of the motion is kept small, Equation (2) will be satisfied and the motion of a simple pendulum will be simple harmonic motion, and

The Simple Pendulum

## Read Online Lab 8 Simple Harmonic Motion

Simple harmonic motion is characterized by this changing acceleration that always is directed toward the equilibrium position and is proportional to the displacement from the equilibrium position. Furthermore, the interval of time for each complete vibration is constant and does not depend on the size of the maximum displacement.
