The IES is proud to introduce The Lighting Library™ which updates, expands, and replaces the 2010 Lighting Handbook and previous versions of our standards. The Lighting Library™ is a new digital platform to access IES standards, offering you an easier, more functional lighting knowledge tool in the office or on the go.

Illuminating Engineering Society—The Lighting Authority  
David L. DiLaura (Boulder, Colorado) is an American engineer, educator and pioneer in lighting calculation software.. He received his Bachelor of Science in physics from Wayne State University in Detroit in 1970, after which he worked for 10 years as an illuminating engineer at the architectural engineering firm of Smith, Hinchman & Grylls. During this time he was also visiting lecturer in ...

The IES Lighting Handbook is an indispensable reference for anyone involved in lighting, including practitioners, designers, architects, and engineers. It is a compendium of what is known that directly relates to lighting and lighting design. This new edition provides a new illuminance determination procedure consisting of visual age-based illuminance ranges and mesopic adaptation. Much information is conveniently summarized in tabular format and exemplified with numerous four-color photographs and illustrations. There is in-depth coverage of sustainability practices: new chapters on daylighting, controls, sustainability, commissioning and energy management

Disk contains: Lotus and Excel spreadsheets.

Lighting by Design provides guidance on where to find inspiration for lighting ideas, how to plan the technical detail and how to execute the plan to create safe, effective and beautiful schemes. Christopher Cuttle's unique three level approach uses Observation, Visualisation and Realisation as the means to achieve these aims. Cuttle is a well known figure in the UK, US and Australia and New Zealand, with a wealth of experience of both teaching and practice. This new edition is fully updated and produced in full colour with many new diagrams and photographs. It will be immensely useful to professional and student architects, interior designers and specialist lighting designers.

"The purpose of [this book] is to provide up-to-date guidance to the people who grapple with real ethical problems in the investment profession, where theory meets practice. This handbook is intended for CFA Institute members navigating ambiguous ethical situations; supervisors and subordinates determining the nature of their responsibilities to one another, to clients and potential clients, and to the securities markets; and candidates preparing for the chartered financial analyst examinations."--Preface.

A comprehensive introduction to the theory and practice of lighting design Designing With Light: The Art, Science, and Practice of Architectural Lighting Design is a comprehensive introduction to the intelligent use of lighting to define and enhance a space. The book explores all aspects of the process, including aesthetics, technology, and practicalities, in a clear, concise manner designed to provide the reader with a full working knowledge of lighting design. Color illustrations throughout demonstrate the real-world effects of the concepts presented, and the companion website offers video animations and exercises to better illuminate the art and science of lighting. The book addresses the considerations that should be a part of any designer's process, and provides thorough guidance on meeting the various demands with smarter design. Lighting is an essential element of interior design, and despite its ubiquity, is difficult to truly master. A designer with a fundamental and conceptual understanding of light is empowered to create simple, typical spaces, or work intelligently with lighting consultants on more complex projects. Designing With Light contains special discussions on color, light, and health, as well as the latest information on energy efficient lighting, control systems, and other technologies. Topics include: Physics, psychology, and perception of light Current and future lighting technology Communication, documentation, and the design process Sustainability, daylighting, and energy efficiency The book also contains an entire chapter on building and energy codes, as well as practical guidance on photometrics and calculations. Lighting can make or break an otherwise well-designed space, so designers need the background to be able to think intelligently about illumination factors during all stages of the process. With comprehensive coverage and thorough explanation, Designing With Light is a complete resource for students and professionals alike.

This book goes right to the heart of what every professional and student needs to know above all - how to effectively meet real-world lighting design challenges.
