Lockout tagout (a.k.a. LOTO, lock and tag) represents a set of safety procedures and practices that protect workers from getting injured by a sudden start-up of the machine or by the release of hazardous energy, while performing maintenance activities. LOTO is required by OSHA and its purpose is to control hazardous energy.

~~How To Write Lockout Tagout Procedure And LOTO Program~~
LOTO, as the name implies, specifies two general approaches to ensure that employees are protected from dangerous equipment during maintenance activities – 1) lockout, and 2) tagout. Lockout physically limits the access to certain equipment while tagout provides visible warning signs to inform employees of potential hazards.

~~LOTO Button - Electrical Safety~~
Lock Out, Tag Out is a safety procedure used in industry and research settings to ensure that dangerous machines are properly shut off and not able to be started up again prior to the completion of maintenance or repair work. It requires that hazardous energy sources be "isolated and rendered inoperative" before work is started on the equipment in question. The isolated power sources are then locked and a tag is placed on the lock identifying the worker who placed it. The worker then holds the k
