It is with great pride that the Psychologists in Long Term Care (PLTC) have sponsored The Professional Educational Long-Term Care Training Manual, and now its second iteration, Geropsychology and Long Term Care: A Practitioner's Guide. Education of psychologists working in long-term care settings is consistent with PLTC's mission to assure the provision of high-quality psychological services for a neglected sector of the population, i.e., residents in nursing homes and assisted-living communities. To this end, direct training of generalist psychologists in the nuances of psychological care delivery in long-term care settings has been a major priority. It is a tribute to the accelerating nature of research in long-term care settings that a revision is now necessary. After all, the Professional Educational Training Manual's initial publication date was only in 2001. However, in the intervening years, much progress has been made in addressing assessment and intervention strategies tailored to the needs of this frail but quite diverse population. It is so gratifying to be able to say that there is now a corpus of scientific knowledge to guide long-term care service delivery in long-term care settings.

Care plans and documentation guidelines for long term care social services

Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations that limit their ability to care for themselves. Improving the Quality of Long-Term Care takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care.

As more people live longer, the need for quality long-term care for the elderly will increase dramatically. This volume examines the current system of nursing home regulations, and proposes an overhaul to better provide for those confined to such facilities. It determines the need for regulations, and concludes that the present regulatory system is inadequate, stating that what is needed is not more regulation, but better regulation. This long-anticipated study provides a wealth of useful background information, in-depth study, and discussion for nursing home administrators, students, and teachers in the health care field; professionals involved in caring for the elderly; and geriatric specialists.

Packed with essential and easy-to-use materials, this bookcovers issues such as quality assurance, finance and budgeting, reimbursement, and staffing concerns in simple, easy-to understand terms.
