science education,
geography, and the
geospatial industry in
ways that embody the
opportunities and
challenges inherent to
this field. This edited
book will serve to

volcanoes,
earthquakes, and
erosion change the
surface of the Earth.

Natural and human-

atmosphere, and
oceans affect all
aspects of life.

Understanding these changes requires a range of observations acquired from land-, sea-, air-, and space-based platforms. To assist NASA, NOAA, and USGS in developing these tools, the NRC was asked to carry out a "decadal strategy" survey of Earth science and

Preparing students to
be active, informed,
literate citizens is one
of the primary
functions of public

schools. But how can students become engaged citizens if they can't read, let alone understand, their social studies texts? What can educators--and social studies teachers in particular--do to help students develop the knowledge, skills, and motivation to become engaged in civic life?

The federal role in precollege science, technology, engineering, and mathematics (STEM) education is receiving increasing attention in light of the need to support public understanding of

science and to
develop a strong
scientific and
technical workforce in
a competitive global
economy. Federal
science agencies,
such as the National
Aeronautics and
Space Administration
(NASA), are being
looked to as a
resource for
enhancing precollege

STEM education and bringing more young people to scientific and technical careers.

For NASA and other federal science agencies, concerns about workforce and public understanding of science also have an immediate local dimension. The agency faces an aerospace workforce

skewed toward those
close to retirement
and job recruitment
competition for those
with science and
engineering degrees.
In addition, public
support for the
agency's missions
stems in part from
public understanding
of the importance of
the agency's
contributions in

exploration. In the
NASA authorization

The text begins with a
revision of estimation

covering both
classical and

philosophies, before
advancing to the
analysis of linear and
generalized linear
models. Topics
covered include linear

models (for factorial,
nested, block, split-
