Medical Terminology: An Accelerated Approach approaches medical terminology not as words to be memorized but as a language to be learned and teaches students to break down words into their composite word parts. Instead of a dictionary full of terms that need to be memorized, a student equipped with groups of roots, prefixes, and suffixes can easily understand a vast amount of medical terminology regardless of how long or short their med term course is. Medical Terminology: An Accelerated Approach bridges the gap between the two fields that make up medical terminology—medicine and second-language acquisition. It provided assistance in language skills to equip health care professionals to use and understand medical terminology and gives them real-world examples that make their knowledge applicable to working in the world of health care.

Developed by the American Medical Association's Accelerating Change in Medical Education Consortium, *Health Systems Science* is the first text that focuses on providing a fundamental understanding of how health care is delivered, how health care professionals work together to deliver that care, and how the health system can improve patient care and health care delivery. Along with basic and clinical science, *Health Systems Science (HSS)* is rapidly becoming a crucial "third pillar" of medical science, requiring a practical, standardized curriculum with an emphasis on understanding the role of human factors, systems engineering, leadership, and patient improvement strategies that will help transform the future of health care and ensure greater patient safety. Complete coverage of the evolving field of HSS includes patient safety, quality improvement, evidence-based medicine, value in health care, interprofessional teamwork, stewardship of health care resources, population management, clinical informatics, care coordination, leadership, and health care financing/reform. Patient improvement strategies incorporates checklists, information technology, team training, and more. A consistent chapter template provides clear coverage of each topic, including Learning Objectives, Chapter Outline, Core Chapter Content, Summary, Questions for Reflection, and Annotated Bibliography and References. Highly relevant content applicable to today's evolving health care delivery written by experts in key, emerging areas of HSS. Developed in partnership with the AMA's Accelerating Change in Medical Education Consortium, at the forefront of change and innovation in medical education.

This compelling account of the author's experience with a chronic pain disorder and subsequent interaction with the American health care system goes to the heart of the workings of power and culture in the biomedical domain. It is a medical whodunit full of mysterious misdiagnosis, subtle power plays, and shrewd detective work. Setting a new standard for the practice of autoethnography, Susan Greenhalgh presents a case study of her intense encounter with an enthusiastic young specialist who, through creative interpretation of the diagnostic criteria for a newly emerging chronic disease, became convinced she had a painful, essentially untreatable, lifelong muscle condition called fibromyalgia. Greenhalgh traces the ruinous effects of this diagnosis on her inner world, bodily health, and overall well-being. *Under the Medical Gaze* serves as a powerful illustration of medicine's power to create and inflict suffering, to define disease and the self, and to manage relationships and lives. Greenhalgh ultimately learns that she had been misdiagnosed and begins the long process of undoing the physical and emotional damage brought about by her nearly catastrophic treatment. In considering how things could go so awry, she embarks on a cogent and powerful analysis of the sociopolitical sources of pain through feminist, cultural, and political understandings of the nature of medical discourse and practice in the United States. She develops fresh arguments about the power of medicine to medicalize our selves and lives, the seductions of medical science, and the deep, psychologically rooted difficulties women patients face in interactions with male physicians. In the end, *Under the Medical Gaze* goes beyond the critique of biomedicine to probe the social roots of chronic pain and therapeutic alternatives that rely on neither the body-cure of conventional medicine nor the mind-cure of some alternative medicines, but rather a broader set of strategies that address the sociopolitical sources of pain.
