The Sri Lanka Journal of Perinatal Medicine was launched in 2019 as the official journal of the Perinatal Society of Sri Lanka. This journal is unique in the fact that it brings together three core specialties of perinatal medicine - obstetrics, neonatology and community medicine.

This book is designed to be the first major text to discuss advances in medical genetics in the developing world.

A food system comprises the entire range of actors and interlinked activities related to food production, processing, distribution, marketing and trade, preparation, consumption, and disposal. When a food system operates without compromising the needs of future generations, it is considered to be a " Sustainable Food System. " The present-day food systems in Sri Lanka are diverse, and the natural and physical environment, infrastructure, institutions, society and culture, and policies and regulations within which the food systems operate, as well as the technologies employed, have shaped their outcomes. Agricultural research is a key factor in terms of innovation and technological advances. Innovation has been the main driver of food systems ' transformation over the past few decades and will be critical to addressing the needs of a rapidly growing population in a context of climate change and scarcity of natural resources. In addition, agricultural research must help meet the rising demand for food at affordable prices. Comprising 17 chapters written by specialist(s) in their respective subject-areas, this Contributed Volume on " Agricultural Research for Sustainable Food Systems in Sri Lanka: A Historical Perspective " shares the scientific knowledge accumulated by the National Agricultural Research System of Sri Lanka, including universities, and offers recommendations on how to make food systems more sustainable in order to address the current needs of Sri Lankan society. It presents perspectives on four key thematic areas, namely: (i) Crop and animal production, management, and improvement, (ii) Agro-product processing technologies, (iii) Natural resource management, and (iv) Socio-economic development and agri-business management.

Social, political, economic and constitutional developments are considered as well as the evolution of science and arts in the development process. This is in accordance with the Sri Lankan tradition of seeing the world as a connected whole."--BOOK JACKET.

The Sri Lankan medicinal system predominantly utilizes herbs and spices for the treatment of various ailments. This is mostly because Sri Lanka is a tropical country, a biodiverse hot-spot blessed with a plethora of flora and fauna. Traditional Herbal Remedies of Sri Lanka looks at the traditional medicinal practices of the country that utilize plant material from a cultural, philosophical and scientific perspective. When it comes to the scientific aspects, several Sri Lankan herbs have been in the spotlight for possessing bioactive constituents with promising therapeutic effects. It is hoped that these will be considered as strong candidates to combat currently prevailing global disease conditions. Key Features: Reveals the science behind the traditional wisdom passed down in Sri Lanka ' s long history of using herbal medicines Emphasizes the increasing global interest in botanical drugs Reviews the hot topic of Sri Lankan herbs, which possess bioactive constituents and have promising therapeutic effects Aids the international natural product communities to better understand the herbal resources in Sri Lanka

A cross-cultural exploration of child abuse in 16 representative countries from around the world.

Why people kill themselves remains an enduring and unanswered question. With a focus on Sri Lanka, a country that for several decades has reported ' epidemic ' levels of suicidal behaviour, this book develops a unique perspective linking the causes and meanings of suicidal practices to social processes across moments, lifetimes and history. Extending anthropological approaches to practice, learning and agency, anthropologist Tom Widger draws from long-term fieldwork in a Sinhala Buddhist community to develop an ethnographic theory of suicide that foregrounds local knowledge and sets out a charter for prevention. The book highlights the motives of children and adults becoming suicidal and how certain gender, age, class relationships and violence are prone to give rise to suicidal responses. By linking these experiences to emotional states, it develops an ethnopsychiatric model of suicide rooted in social practice. Widger then goes on to examine how suicides are resolved at village and national levels, tracing the roots of interventions to the politics of colonial and post-colonial social welfare and health regimes. Exploring local accounts of suicide as both ' evidence ' for the suicide epidemic and as an ' ethos ' of suicidality shaping subjective worlds, Suicide in Sri Lanka shows how anthropological analysis can offer theoretical as well as policy insights. With the inclusion of straightforward summaries and implications for prevention at the end of each chapter, this book has relevance for specialists and non-specialists alike. It represents an important new contribution to South Asian Studies, Social Anthropology and Medical Anthropology, as well as to cross-cultural Suicidology.
