Level C: Patients with mild TBI discharged from the ED should be informed about postconcussive symptoms. Talking Points for Use With Patients. A concussion is a brain injury caused by a bump, blow, or jolt to the head or body that causes the head and brain to move quickly back and forth. Although usually not life-threatening, a concussion may change the way the brain works, and can sometimes be serious. You may experience a range of symptoms over the next few days, such as difficulty ...
