Moyers chaired the University of Michigan, School of Dentistry's Department of Orthodontics (1953-1966) and later was the Founding Director of the UM Center for Human Growth and Development (1964-1980). The Center was established as a university-wide interdisciplinary unit to better understand childhood growth and development.

MOYERS SYMPOSIUM

Model analysis in orthodontics. 1. MODEL ANALYSIS. 2.

INTRODUCTION Model analysis is the study of dental casts, which helps to study the occlusion & dentition from all three dimensions & analyze the degree & severity of malocclusion & to derive the diagnosis & plan for treatment. Models accurately reproduce the teeth & their surrounding soft tissue. Soft tissue must not be altered. Models should be well finished.

Moyers Analysis Orthodontics - staging.epigami.sg

Therefore, mixed dentition analysis is normally done to predict the space required for the alignment of the unerupted canines and premolars since the space available between the lateral incisor and the first permanent molar is limited.²This analysis is based not only on the correlation between the sizes of all permanent teeth anterior to the first molars, but also on the available arch perimeter, and the expected

changes in arch dimensions resulting from growth and development.³

Quantitative analysis of various facial qualities enables the clinician to refer to the most typical signs of the attractive face. The clinician, just like the artist, must possess artistic talent and good clinical judgment to achieve an esthetic result fitted to the needs of a particular face. References. 1. Enlow DH, Moyers RE.
