Neuroscience (or neurobiology) is the scientific study of the nervous system. It is a multidisciplinary science that combines physiology, anatomy, molecular biology, developmental biology, cytology, mathematical modeling, and psychology to understand the fundamental and emergent properties of neurons and neural circuits. The understanding of the biological basis of learning, memory, behavior ...

Neuroscience - Wikipedia

n (y) or s/. noun. any or all of the sciences, such as neurochemistry and experimental psychology, which deal with the structure or function of the nervous system and brain. Neuroscience, also known as Neural Science, is the study of how the nervous system develops, its structure, and what it does. Neuroscientists focus on the brain and its impact on behavior and cognitive functions.

Neuroscience is the study of the nervous system, which includes the brain, spinal cord, and nerves. The brain controls every aspect of the body, from emotion and memory to basic bodily activities such as movement, breathing, and controlling the heartbeat. Neuroscience is largely about the study of behavior—why do we do what we do, and how does the brain carry out these tasks?
