**World Steel Production & Consumption Outlook | MEPS**

Non-OECD energy consumption is 68% higher by 2030, averaging 2.6% p.a. growth from 2010, and accounts for 93% of global energy growth. OECD energy consumption in 2030 is just 6% higher than today, with growth averaging 0.3% p.a. to 2030. From 2020, OECD energy consumption per capita is on a declining trend (-0.2% p.a.).

**Energy Outlook 2030 - BP**

Short-term outlook to 2022 If demand growth stays healthy and OPEC maintains disciplined regarding production, we expect to see average oil prices in the USD60-70/bbl range to 2020. After 2020, prices are likely to remain closer to USD60/bbl, due primarily to sluggish demand growth and continued production of shale oil in North America.

A more in-depth look at the outlook for the British pork market can be found here. UK production Following strong slaughter growth in late 2019 and early 2020, we now think the breeding herd grew by about 3% last year.

**Pork market outlook | AHDB**

During 2020, UK sheep meat production is forecast to drop to 287,000 tonnes cwe. This is a significant drop on the year, although 2019 production was the highest in recent years. So far in 2020 production has already dropped, with production down by more than 11,000 tonnes since the end of March.

**Lamb market outlook | AHDB**

A Historical Trends scenario shows that the current trajectory of natural resource use and management is unsustainable, while a Towards Sustainability scenario shows that implementing resource efficiency and sustainable consumption and production policies promotes stronger economic growth, improves well-being, helps to support more equal distribution of income and reduces resource use across countries.

**Global Resources Outlook | Resource Panel**

In the U.S. Energy Information Administration's (EIA) Annual Energy Outlook 2020 (AEO2020) Reference case, U.S. energy consumption grows more slowly than gross domestic product throughout the projection period (2050) as U.S. energy efficiency continues to increase. This decline in the energy intensity of the U.S. economy continues through 2050.

**Annual Energy Outlook 2020**

Without a major shift in area, or any large yield impacts currently expected, we could be set for production levels c.5.5Mt. However, there are still the critical last stages of the growing season to see through. The current longer-term forecast from the Met Office is for a "drier and warmer than average" period.

**Potatoes market outlook | AHDB**

The Outlook to 2027 for Canadian Fish and Seafood presents the results of a dynamic simulation model developed at Fisheries and Oceans Canada and includes projections of global consumption, production and trade for 12 species groups of fish and seafood. The Outlook does not present a specific prediction of the future but describes a plausible, forward-looking assessment based on the best available information.

**Outlook to 2027 for Canadian Fish and Seafood**

EIA forecasts industrial consumption will average 22.5 Bcf/d in 2020, down 0.6 Bcf/d from 2019 as a result of reduced manufacturing activity. EIA expects total U.S. natural gas consumption will average 79.4 Bcf/d in 2021, a 5.2% decline from 2020.
