"Philosophical Documents in Education, 3/e, masterfully argues that students can better understand and practice their profession by reading, contemplating, and discussing the great philosophic tradition in education. An edited anthology of 18 primary source materials in educational philosophy, this text provides a wide range of both historical and contemporary viewpoints."--BOOK JACKET.

This book offers an extensive introduction to the philosophical work of Catharine Macaulay, as expressed in her Letters on Education (1790). It traces the theme of gender and education comparing Macaulay's ideas to those of her contemporaries, Jean-Jacques Rousseau, Hester Chapone, and Stéphanie de Genlis. In the process, it presents a clear picture of the eighteenth-century quarrel that debates the interassociation among gender, education, and intellectual attainment. This book intends to initiate an informed conversation with contemporary readers about Macaulay's work on education within its own historical context so that fair assessments of her work can be made. It also argues that any complete history of the philosophy of education must include Macaulay's work.

A work by John Locke about education.

Section one of the book explores the nature of the philosophy of education and its relation to other aspects of educational theory and research. Section two is devoted to particular thinkers of the past, and more general coverage of the history of philosophy of education. Section three is dedicated to contemporary philosophical thought on education, providing the basis and reference point for an exploration of contemporary issues. --

The culmination of a lifetime's scholarly work, this study by Sister Prudence Allen traces the concept of woman in relation to man in Western thought from ancient times to the present. This volume is the second in her study, in which she explores claims about sex and gender identity in the works of over fifty philosophers (both men and women) in the late medieval and early Renaissance periods.

This survey provides a brief and selective overview of research in the philosophy of mathematics education. It asks what makes up the philosophy of mathematics education, what it means, what questions it asks and answers, and what is its overall importance and use? It provides overviews of critical mathematics education, and the most relevant modern movements in the philosophy of mathematics. A case study is provided of an emerging research tradition in one country. This is the Hermeneutic strand of research in the philosophy of mathematics education in Brazil. This illustrates one orientation towards research inquiry in the philosophy of mathematics education. It is part of a broader practice of 'philosophical archaeology': the uncovering of hidden assumptions and buried ideologies within the concepts and methods of research and practice in mathematics education. An extensive bibliography is also included.

A translation and discussion of the central Confucian text on education, Xueji (On Learning and Teaching), influential in China from the Han dynasty to the present day. Written over two and a half millennia ago, the Xueji (On Teaching and Learning) is one of the oldest and most comprehensive works on educational philosophy and teaching methods as well as a consideration of the appropriate roles of teachers and students. The Xueji was included in the Liji (On Ritual), one of the Five Classics that became the heart of the educational system during China's imperial era, and it contains the ritual protocols adopted by the Imperial Academy during the Han dynasty. Chinese Philosophy on Teaching and Learning provides a new translation of the Xueji along with essays exploring this work from both Western and Chinese perspectives. Contributors examine the roots of educational thought in classical Chinese philosophy, outline similarities and differences with ideas rooted in classical Greek thought, and explore what the Xueji can offer educators today. "As the world of education awakens to the vitality and importance of China's educational traditions, no text could be of greater interest than the Xueji-China's most ancient text on learning and teaching. This translation, with interpretation and discussion from noted philosophers and educators in China and America, will be an invaluable resource for courses in educational foundations, comparative education, and the history of education." -- Ruth Hayhoe, University of Toronto

Transcendent Teacher Learner Relationships: The Way of the Shamanic Teacher (Second Edition) explores the nature of the transcendent teacher learner relationship and precisely how such relationships of warmth, safety, mutual care, mutual respect and mutual trust are developed and maintained.

This volume traces the history of Western philosophy of education from the Medieval through the Renaissance period (500-1550). This vast expanse of time includes the rise of Christian monasticism (one of the most enduring and revolutionary models of education in the history of the West), the birth of Islam (with its advances in mathematical, scientific, and philosophical reasoning), the rise of the university (as an emerging force distinct from ecclesiastical and state control), and the dawn of the Enlightenment. It includes chapters on the educational thought of Benedict, Abelard, Heloise, Aquinas, Maimonides, the prophet Mohammed, Hrosvitha of Gandersheim, Hildegard of Bingen, among others. It also considers the educational impact of Reformation thinkers like Erasmus and Luther, and Renaissance thinkers such as Montaigne. About A History of Western Philosophy of Education: An essential resource for researchers, scholars, and students of education, this five-volume set that traces the development of philosophy of education through Western culture and history. Focusing on philosophers who have theorized education and its implementation, the series constitutes a fresh, dynamic, and developing view of educational philosophy. It expands our educational possibilities by reinvigorating philosophy's vibrant critical tradition, connecting old and new perspectives, and identifying the continuity of critique and reconstruction. It also includes a timeline showing major historical events, including educational initiatives and the publication of noteworthy philosophical works.

. Renewal of Life by Transmission. The most notable distinction between living and inanimate things is that the former maintain themselves by renewal. A stone when struck resists. If its resistance is greater than the force of the blow struck, it remains outwardly unchanged. Otherwise, it is shattered into smaller bits. Never does the stone attempt to react in such a way that it may maintain itself against the blow, much less so as to render the blow a contributing factor to its own continued action. While the living thing may easily be crushed by superior force, it none the less tries to turn the energies which act upon it into means of its own further existence. If it cannot do so, it does not just split into smaller pieces (at least in the higher forms of life), but loses its identity as a living thing. As long as it endures, it struggles to use surrounding energies in its own behalf. It uses light, air, moisture, and the material of soil. To say that it uses them is to say that it turns them into means of its own conservation. As long as it is growing, the energy it expends in thus turning the environment to account is more than compensated for by the return it gets: it grows. Understanding the word "control" in this sense, it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up. Life is a self-renewing process through action upon the environment.
